Common Vulnerabilities and Exposures (CVE) Report

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Application					
Vendor: adguard					
Product: adguardhome					
Affected Version(s): 0.108					
Cross-Site Request Forgery (CSRF)	11-Oct-2022	4.3	In AdGuardHome, versions v0.95 through v0.108.0-b.13 are vulnerable to Cross-Site Request Forgery (CSRF), in the custom filtering rules functionality. An attacker can persuade an authorized user to follow a malicious link, resulting in deleting/modifying the custom filtering rules. **CVE ID : CVE-2022-32175**	N/A	A-ADG-ADGU-201022/1
Affected Version(s): From (including) 0.95 Up to (excluding) 0.108					
Cross-Site Request Forgery (CSRF)	11-Oct-2022	4.3	In AdGuardHome, versions v0.95 through v0.108.0-b.13 are vulnerable to Cross-Site Request Forgery (CSRF), in the custom filtering rules functionality. An attacker can persuade an authorized user to follow a malicious link, resulting in deleting/modifying	N/A	A-ADG-ADGU-201022/2

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			the custom filtering rules. **CVE ID : CVE-2022-32175**		
Vendor: Apache					
Product: airflow					
Affected Version(s): * Up to (including) 2.4.1					
Insufficient Session Expiration	07-Oct-2022	8.1	In Apache Airflow, prior to version 2.4.1, deactivating a user wouldn't prevent an already authenticated user from being able to continue using the UI or API. **CVE ID : CVE-2022-41672**	https://github.com/apache/airflow/pull/26635, https://lists.apache.org/thread/ohf3pvd3dftb8zb01yngbn1jtkq5m08y	A-APA-AIRF-201022/3
Product: commons_jxpath					
Affected Version(s): * Up to (including) 1.3					
Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection')	06-Oct-2022	9.8	Those using JXPath to interpret untrusted XPath expressions may be vulnerable to a remote code execution attack. All JXPathContext class functions processing a XPath string are vulnerable except compile() and compilePath() function. The XPath expression can be used by an attacker to load any Java class from the classpath resulting in code execution.	N/A	A-APA-COMM-201022/4

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2022-41852		
Out-of-bounds Write	06-Oct-2022	6.5	Those using JXPath to interpret XPath may be vulnerable to Denial of Service attacks (DOS). If the parser is running on user supplied input, an attacker may supply content that causes the parser to crash by stackoverflow. This effect may support a denial of service attack. **CVE ID : CVE-2022-40157**	N/A	A-APA-COMM-201022/5
Out-of-bounds Write	06-Oct-2022	6.5	Those using JXPath to interpret XPath may be vulnerable to Denial of Service attacks (DOS). If the parser is running on user supplied input, an attacker may supply content that causes the parser to crash by stackoverflow. This effect may support a denial of service attack. **CVE ID : CVE-2022-40158**	N/A	A-APA-COMM-201022/6
Out-of-bounds Write	06-Oct-2022	6.5	Those using JXPath to interpret XPath may be vulnerable to Denial of Service attacks (DOS). If the parser is running	N/A	A-APA-COMM-201022/7

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			on user supplied input, an attacker may supply content that causes the parser to crash by stackoverflow. This effect may support a denial of service attack. **CVE ID : CVE-2022-40159**		
Out-of-bounds Write	06-Oct-2022	6.5	Those using JXPath to interpret XPath may be vulnerable to Denial of Service attacks (DOS). If the parser is running on user supplied input, an attacker may supply content that causes the parser to crash by stackoverflow. This effect may support a denial of service attack. **CVE ID : CVE-2022-40160**	N/A	A-APA-COMM-201022/8
Out-of-bounds Write	06-Oct-2022	6.5	Those using JXPath to interpret XPath may be vulnerable to Denial of Service attacks (DOS). If the parser is running on user supplied input, an attacker may supply content that causes the parser to crash by stackoverflow. This effect may support	N/A	A-APA-COMM-201022/9

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			a denial of service attack. **CVE ID : CVE-2022-40161**		
Product: shiro					
Affected Version(s): * Up to (excluding) 1.10.0					
Improper Authentication	12-Oct-2022	9.8	Apache Shiro before 1.10.0, Authentication Bypass Vulnerability in Shiro when forwarding or including via RequestDispatcher. **CVE ID : CVE-2022-40664**	https://lists.apache.org/thread/loc2ktxng32xpy7lfwxto13k4lvnhjwg	A-APA-SHIR-201022/10
Vendor: Autodesk					
Product: advanced_material_exchange					
Affected Version(s): 2019					
Out-of-bounds Write	03-Oct-2022	7.8	A malicious crafted file consumed through Moldflow Synergy, Moldflow Adviser, Moldflow Communicator, and Advanced Material Exchange applications could lead to memory corruption vulnerability. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process.	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0019	A-AUT-ADVA-201022/11

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2022-33883		
Affected Version(s): 2021					
Out-of-bounds Write	03-Oct-2022	7.8	A malicious crafted file consumed through Moldflow Synergy, Moldflow Adviser, Moldflow Communicator, and Advanced Material Exchange applications could lead to memory corruption vulnerability. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process. **CVE ID : CVE-2022-33883**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0019	A-AUT-ADVA-201022/12
Product: autocad					
Affected Version(s): * Up to (excluding) 2022.1.3					
Out-of-bounds Write	03-Oct-2022	7.8	A maliciously crafted GIF or JPEG files when parsed through Autodesk Design Review 2018, and AutoCAD 2023 and 2022 could be used to write beyond the allocated heap buffer. This vulnerability could lead to arbitrary code execution.	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0021	A-AUT-AUTO-201022/13

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2022-33889		
Out-of-bounds Write	03-Oct-2022	7.8	A maliciously crafted PCT or DWF file when consumed through DesignReview.exe application could lead to memory corruption vulnerability by read access violation. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process. **CVE ID : CVE-2022-33890**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0021	A-AUT-AUTO-201022/14
Affected Version(s): From (including) 2020 Up to (excluding) 2020.1.6					
Out-of-bounds Read	03-Oct-2022	7.5	Parsing a maliciously crafted X_B file can force Autodesk AutoCAD 2023 and 2022 to read beyond allocated boundaries. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process. **CVE ID : CVE-2022-33884**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/15

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Affected Version(s): From (including) 2021 Up to (excluding) 2021.1.3					
Out-of-bounds Read	03-Oct-2022	7.5	Parsing a maliciously crafted X_B file can force Autodesk AutoCAD 2023 and 2022 to read beyond allocated boundaries. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process. **CVE ID : CVE-2022-33884**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/16
Affected Version(s): From (including) 2022 Up to (excluding) 2022.1.3					
Out-of-bounds Write	03-Oct-2022	7.8	A maliciously crafted X_B, CATIA, and PDF file when parsed through Autodesk AutoCAD 2023 and 2022 can be used to write beyond the allocated buffer. This vulnerability can lead to arbitrary code execution. **CVE ID : CVE-2022-33885**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/17
Improper Handling of Exceptional Conditions	03-Oct-2022	7.8	A maliciously crafted MODEL and SLDPRT file can be used to write beyond the allocated buffer while parsing	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/18

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			through Autodesk AutoCAD 2023 and 2022. The vulnerability exists because the application fails to handle crafted MODEL and SLDPRT files, which causes an unhandled exception. An attacker can leverage this vulnerability to execute arbitrary code. **CVE ID : CVE-2022-33886**		
Improper Handling of Exceptional Conditions	03-Oct-2022	7.8	A maliciously crafted PDF file when parsed through Autodesk AutoCAD 2023 causes an unhandled exception. An attacker can leverage this vulnerability to cause a crash or read sensitive data or execute arbitrary code in the context of the current process. **CVE ID : CVE-2022-33887**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/19
Out-of-bounds Write	03-Oct-2022	7.8	A malicious crafted Dwg2Spd file when processed through Autodesk DWG application could	https://www.autodesk.com/trust/security-advisories/ads	A-AUT-AUTO-201022/20

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			lead to memory corruption vulnerability by write access violation. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process. **CVE ID : CVE-2022-33888**	k-sa-2022-0020	
Out-of-bounds Read	03-Oct-2022	7.5	Parsing a maliciously crafted X_B file can force Autodesk AutoCAD 2023 and 2022 to read beyond allocated boundaries. This vulnerability in conjunction with other vulnerabilities could lead to code execution in the context of the current process. **CVE ID : CVE-2022-33884**	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/21
Affected Version(s): From (including) 2023 Up to (excluding) 2023.1.1					
Out-of-bounds Write	03-Oct-2022	7.8	A maliciously crafted X_B, CATIA, and PDF file when parsed through Autodesk AutoCAD 2023 and 2022 can be used to write beyond the	https://www.autodesk.com/trust/security-advisories/adsk-sa-2022-0020	A-AUT-AUTO-201022/22

Affected Version(s): From (including) 4.0.0 Up to (excluding) 4.2.7					
Improper Initialization	06-Oct-2022	4.3	CodeIgniter is a PHP full-stack web framework. In versions prior to 4.2.7 setting `$secure` or `$httponly` value to `true` in `Config\Cookie` is not reflected in `set_cookie()` or `Response::setCookie()`. As a result cookie values are erroneously exposed to scripts.	https://github.com/codeigniter4/CodeIgniter4/security/advisories/GHSA-745p-r637-7vvp, https://github.com/codeigniter4/CodeIgniter4/pull/6544	A-COD-CODE-201022/255

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			It should be noted that this vulnerability does not affect session cookies. Users are advised to upgrade to v4.2.7 or later. Users unable to upgrade are advised to manually construct their cookies either by setting the options in code or by constructing Cookie objects. Examples of each workaround are available in the linked GHSA. **CVE ID : CVE-2022-39284**		
Vendor: crealogix					
Product: ebics_server					
Affected Version(s): 7.0					
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	10-Oct-2022	6.1	A vulnerability was found in Crealogix EBICS 7.0. It has been rated as problematic. Affected by this issue is some unknown functionality of the file /ebics-server/ebics.aspx. The manipulation leads to cross site scripting. The attack may be launched remotely. The exploit has	N/A	A-CRE-EBIC-201022/256

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			been disclosed to the public and may be used. Upgrading to version 7.1 is able to address this issue. It is recommended to upgrade the affected component. VDB-210374 is the identifier assigned to this vulnerability. **CVE ID : CVE-2022-3442**

Affected Version(s): From (including) 1.4.56 Up to (excluding) 1.4.67					
Missing Release of Memory after Effective Lifetime	06-Oct-2022	7.5	A resource leak in gw_backend.c in lighttpd 1.4.56 through 1.4.66 could lead to a denial of service (connection-slot exhaustion) after a large amount of anomalous TCP behavior by clients. It is related to RDHUP mishandling in certain HTTP/1.1 chunked situations. Use of mod_fastcgi is, for example, affected. This is fixed in 1.4.67.	https://git.lighttpd.net/lighttpd/lighttpd1.4/commit/b18de6f9264f914f7bf493abd3b6059343548e50	A-LIG-LIGH-201022/438

N/A	03-Oct-2022	7.5	Dapr Dashboard v0.1.0 through v0.10.0 is vulnerable to Incorrect Access Control that allows attackers to obtain sensitive data. **CVE ID : CVE-2022-38817**	N/A	A-LIN-DAPR-201022/440
Product: dex					

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Affected Version(s): * Up to (excluding) 2.35.0					
Exposure of Sensitive Information to an Unauthorized Actor	06-Oct-2022	6.5	Dex is an identity service that uses OpenID Connect to drive authentication for other apps. Dex instances with public clients (and by extension, clients accepting tokens issued by those Dex instances) are affected by this vulnerability if they are running a version prior to 2.35.0. An attacker can exploit this vulnerability by making a victim navigate to a malicious website and guiding them through the OIDC flow, stealing the OAuth authorization code in the process. The authorization code then can be exchanged by the attacker for a token, gaining access to applications accepting that token. Version 2.35.0 has introduced a fix for this issue. Users are advised to upgrade. There are no	https://github.com/dexidp/dex/security/advisories/GHSA-vh7g-p26c-j2cw, https://github.com/dexidp/dex/commit/49471b14c8080ddb034d4855841123d378b7a634	A-LIN-DEX-201022/441

Vendor: Openssl					
Product: openssl					
Affected Version(s): From (including) 3.0.0 Up to (excluding) 3.0.6					
NULL Pointer Dereference	11-Oct-2022	7.5	OpenSSL supports creating a custom cipher via the legacy EVP_CIPHER_meth_new() function and associated function calls. This function was deprecated in OpenSSL 3.0 and	https://www.openssl.org/news/secadv/20221011.txt, https://git.openssl.org/gitweb/?p=openssl.git;a=commitdiff;h=5485c56679d7c49b96e8fc8c	A-OPE-OPEN-201022/563

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			application authors are instead encouraged to use the new provider mechanism in order to implement custom ciphers. OpenSSL versions 3.0.0 to 3.0.5 incorrectly handle legacy custom ciphers passed to the EVP_EncryptInit_ex2(), EVP_DecryptInit_ex2() and EVP_CipherInit_ex2() functions (as well as other similarly named encryption and decryption initialisation functions). Instead of using the custom cipher directly it incorrectly tries to fetch an equivalent cipher from the available providers. An equivalent cipher is found based on the NID passed to EVP_CIPHER_meth_new(). This NID is supposed to represent the unique NID for a given cipher. However it is possible for an application to incorrectly pass	a708b0b7e7c03c4b	

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			NID_undef as this value in the call to EVP_CIPHER_meth_new(). When NID_undef is used in this way the OpenSSL encryption/decryption initialisation function will match the NULL cipher as being equivalent and will fetch this from the available providers. This will succeed if the default provider has been loaded (or if a third party provider has been loaded that offers this cipher). Using the NULL cipher means that the plaintext is emitted as the ciphertext. Applications are only affected by this issue if they call EVP_CIPHER_meth_new() using NID_undef and subsequently use it in a call to an encryption/decryption initialisation function. Applications that only use SSL/TLS are not impacted by this issue. Fixed in OpenSSL 3.0.6

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	11-Oct-2022	7.5	SAP Manufacturing Execution - versions 15.1, 15.2, 15.3, allows an attacker to exploit insufficient validation of a file path request parameter. The intended file path can be manipulated to allow arbitrary traversal of directories on the remote server. The file content within each directory can be read which may lead to information disclosure. **CVE ID : CVE-2022-39802**	https://www.sap.com/documents/2022/02/fa865ea4-167e-0010-bca6-c68f7e60039b.html, https://launchpad.support.sap.com/#/notes/3242933,https://www.sap.com/documents/2022/02/fa865ea4-167e-0010-bca6-c68f7e60039b.html	A-SAP-MANU-201022/705
Product: sap_iq					
Affected Version(s): 16.1					
Stack-based Buffer Overflow	11-Oct-2022	9.8	SAP SQL Anywhere - version 17.0, and SAP IQ - version 16.1, allows an attacker to leverage logical errors in memory management to cause a memory corruption, such as Stack-based buffer overflow. **CVE ID : CVE-2022-35299**	https://launchpad.support.sap.com/#/notes/3232021, https://www.sap.com/documents/2022/02/fa865ea4-167e-0010-bca6-c68f7e60039b.html	A-SAP-SAP_-201022/706

Product: loramac-node					
Affected Version(s): * Up to (excluding) 4.7.0					
Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	06-Oct-2022	9.8	LoRaMac-node is a reference implementation and documentation of a LoRa network node. Versions of LoRaMac-node prior to 4.7.0 are vulnerable to a buffer overflow. Improper size validation of the incoming radio frames can lead to an 65280-byte out-of-bounds write. The function `ProcessRadioRxDone` implicitly expects incoming radio frames to have at least a payload of one byte or more. An empty payload leads to a	https://github.com/Lora-net/LoRaMac-node/commit/e851b079c82ba1bcf3f4d291ab69a571b0bf458a, https://github.com/Lora-net/LoRaMac-node/security/advisories/GHSA-7vv8-73pc-63c2	A-SEM-LORA-201022/708

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			1-byte out-of-bounds read of user controlled content when the payload buffer is reused. This allows an attacker to craft a FRAME_TYPE_PROPRIETARY frame with size -1 which results in an 65280-byte out-of-bounds memcopy likely with partially controlled attacker data. Corrupting a large part if the data section is likely to cause a DoS. If the large out-of-bounds write does not immediately crash the attacker may gain control over the execution due to now controlling large parts of the data section. Users are advised to upgrade either by updating their package or by manually applying the patch commit `e851b079`. **CVE ID : CVE-2022-39274**

Use of Insufficiently Random Values	06-Oct-2022	7.5	RabbitMQ is a multi-protocol messaging and streaming broker. In affected versions the shovel and federation plugins perform URI obfuscation in their worker (link) state. The encryption key used to encrypt the URI was seeded with a predictable secret. This means that in case of certain exceptions related to Shovel and Federation plugins, reasonably easily deobfuscatable data could appear in the node log. Patched versions correctly use a cluster-wide secret for that purpose. This issue has been addressed and Patched versions: `3.10.2`, `3.9.18`, `3.8.32` are available. Users unable to upgrade should disable the Shovel and Federation plugins. **CVE ID : CVE-2022-31008**	https://github.com/rabbitmq/rabbitmq-server/pull/4841, https://github.com/rabbitmq/rabbitmq-server/security/advisories/GHSA-v9gv-xp36-jgj8	A-VMW-RABB-201022/771

N/A	10-Oct-2022	8.6	A vulnerability in the egress MPLS packet processing function of Cisco IOS XE Software for Cisco Catalyst 3650, Catalyst 3850, and Catalyst 9000 Family Switches could allow an unauthenticated, remote attacker to cause an affected device to reload unexpectedly, resulting in a denial of service (DoS) condition. This vulnerability is due to insufficient input validation of IPv4 traffic. An attacker could exploit this vulnerability by sending a malformed packet out of an affected MPLS-enabled interface. A successful exploit could allow the attacker to cause the device to reload, resulting in a DoS condition. **CVE ID : CVE-2022-20870**	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-iosxe-mpls-dos-Ab4OUL3	H-CIS-CATA-201022/931

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			(ROMMON) Software for Cisco Catalyst Switches could allow an unauthenticated, local attacker to recover the configuration or reset the enable password. This vulnerability is due to a problem with the file and boot variable permissions in ROMMON. An attacker could exploit this vulnerability by rebooting the switch into ROMMON and entering specific commands through the console. A successful exploit could allow the attacker to read any file or reset the enable password. **CVE ID : CVE-2022-20864**	o-sa-iosxe-info-disc-nrORXjO	
Product: catalyst_3650-24ps-s

N/A	10-Oct-2022	8.6	A vulnerability in the egress MPLS packet processing function of Cisco	https://tools.cisco.com/security/center/content/CiscoSecurit	H-CIS-CATA-201022/1031

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			IOS XE Software for Cisco Catalyst 3650, Catalyst 3850, and Catalyst 9000 Family Switches could allow an unauthenticated, remote attacker to cause an affected device to reload unexpectedly, resulting in a denial of service (DoS) condition. This vulnerability is due to insufficient input validation of IPv4 traffic. An attacker could exploit this vulnerability by sending a malformed packet out of an affected MPLS-enabled interface. A successful exploit could allow the attacker to cause the device to reload, resulting in a DoS condition. **CVE ID : CVE-2022-20870**	yAdvisory/cisco-sa-iosxe-mpls-dos-Ab4OUL3

Improper Verification of Cryptographic Signature	10-Oct-2022	6.8	A vulnerability in the software image verification functionality of Cisco IOS XE Software for Cisco Catalyst 9200 Series Switches could allow an unauthenticated, physical attacker to execute unsigned code at system boot time. This vulnerability is due to an improper check in the code function that	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-ios-xe-cat-verify-D4NEQA6q	H-CIS-CATA-201022/1129

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			manages the verification of the digital signatures of system image files during the initial boot process. An attacker could exploit this vulnerability by loading unsigned software on an affected device. A successful exploit could allow the attacker to boot a malicious software image or execute unsigned code and bypass the image verification check part of the boot process of the affected device. To exploit this vulnerability, the attacker needs either unauthenticated physical access to the device or privileged access to the root shell on the device. Note: In Cisco IOS XE Software releases 16.11.1 and later, root shell access is protected by the Consent Token mechanism. However, an attacker with level-15 privileges could easily downgrade

N/A	10-Oct-2022	8.6	A vulnerability in the egress MPLS packet processing function of Cisco IOS XE Software for Cisco Catalyst 3650, Catalyst 3850, and Catalyst 9000 Family Switches could allow an unauthenticated, remote attacker to cause an affected device to reload unexpectedly, resulting in a denial of service (DoS) condition. This vulnerability is due to insufficient input validation of IPv4 traffic. An attacker could exploit this vulnerability by sending a malformed packet out of an affected MPLS-enabled interface. A successful exploit could allow the attacker to cause the device to reload, resulting in a DoS condition. **CVE ID : CVE-2022-20870**	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-iosxe-mpls-dos-Ab4OUL3	H-CIS-CATA-201022/1228

Improper Verification of Cryptographic Signature	10-Oct-2022	6.8	A vulnerability in the software image verification functionality of Cisco IOS XE Software for Cisco Catalyst 9200 Series Switches could allow an unauthenticated, physical attacker to execute unsigned code at system boot time. This vulnerability is due to an improper check in the code function that	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-ios-xe-cat-verify-D4NEQA6q	H-CIS-CATA-201022/1257

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			manages the verification of the digital signatures of system image files during the initial boot process. An attacker could exploit this vulnerability by loading unsigned software on an affected device. A successful exploit could allow the attacker to boot a malicious software image or execute unsigned code and bypass the image verification check part of the boot process of the affected device. To exploit this vulnerability, the attacker needs either unauthenticated physical access to the device or privileged access to the root shell on the device. Note: In Cisco IOS XE Software releases 16.11.1 and later, root shell access is protected by the Consent Token mechanism. However, an attacker with level-15 privileges could easily downgrade

			CVE ID : CVE-2022-32487		
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32488**	https://www.dell.com/support/kbdoc/000203758	H-DEL-INSP-201022/1947
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32489**	https://www.dell.com/support/kbdoc/000203758	H-DEL-INSP-201022/1948
Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	12-Oct-2022	7.8	Dell Client BIOS contains a Buffer Overflow vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by manipulating an SMI to cause an arbitrary write during SMM.	https://www.dell.com/support/kbdoc/000203758	H-DEL-INSP-201022/1949

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2022-32491		
Out-of-bounds Write	12-Oct-2022	7.8	Dell BIOS contains an Stack-Based Buffer Overflow vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32493**	https://www.dell.com/support/kbdoc/000203758	H-DEL-INSP-201022/1950
Improper Input Validation	12-Oct-2022	4.4	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user with admin privileges may potentially exploit this vulnerability in order to modify a UEFI variable. **CVE ID : CVE-2022-32483**	https://www.dell.com/support/kbdoc/000203758	H-DEL-INSP-201022/1951
Improper Input Validation	12-Oct-2022	4.4	Dell BIOS contains an improper input validation vulnerability. 			CVE ID : CVE-2022-32491		
Out-of-bounds Write	12-Oct-2022	7.8	Dell BIOS contains an Stack-Based Buffer Overflow vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32493**	https://www.dell.com/support/kbdoc/000203758	H-DEL-VOST-201022/3422
Improper Input Validation	12-Oct-2022	4.4	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user with admin privileges may potentially exploit this vulnerability in order to modify a UEFI variable. **CVE ID : CVE-2022-32483**	https://www.dell.com/support/kbdoc/000203758	H-DEL-VOST-201022/3423
Improper Input Validation	12-Oct-2022	4.4	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user with admin privileges may potentially exploit this vulnerability in order to modify a UEFI variable.	https://www.dell.com/support/kbdoc/000203758	H-DEL-VOST-201022/3424

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2022-32484		
Product: vostro_3669					
Affected Version(s): -					
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32485**	https://www.dell.com/support/kbdoc/000203758	H-DEL-VOST-201022/3425
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32487**	https://www.dell.com/support/kbdoc/000203758	H-DEL-VOST-201022/3426
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code	https://www.dell.com/support/kbdoc/000203758	H-DEL-VOST-201022/3427
