Missing Release of Memory after Effective Lifetime	11-Oct-2022	7.5	A vulnerability has been identified in Nucleus NET (All versions), Nucleus ReadyStart V3 (All versions), Nucleus Source Code (Versions including affected FTP server). The FTP server does not properly release memory resources that were reserved for incomplete connection attempts by FTP clients. This could allow a remote attacker to generate a denial of service condition on devices that incorporate a vulnerable version of the FTP server. **CVE ID : CVE-2022-38371**	https://cert-portal.siemens.com/productcert/pdf/ssa-935500.pdf, https://cert-portal.siemens.com/productcert/pdf/ssa-313313.pdf	H-SIE-DESI-201022/4216

SIPLUS variants) (All versions < V4.5.0), SIMATIC S7-1500 CPU family (incl. related ET200 CPUs and SIPLUS variants) (All versions < V2.9.2), SIMATIC S7-1500	https://cert-portal.siemens.com/productcert/pdf/ssa-568427.pdf	H-SIE-SIMA-201022/4369

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			Software Controller (All versions < V21.9), SIMATIC S7-PLCSIM Advanced (All versions < V4.0). Affected products protect the built-in global private key in a way that cannot be considered sufficient any longer. The key is used for the legacy protection of confidential configuration data and the legacy PG/PC and HMI communication. This could allow attackers to discover the private key of a CPU product family by an offline attack against a single CPU of the family. Attackers could then use this knowledge to extract confidential configuration data from projects that are protected by that key or to perform attacks against legacy PG/PC and HMI communication. **CVE ID : CVE-2022-38465**

Improper Check for Unusual or Exceptional Conditions	10-Oct-2022	8.6	A vulnerability in the DNS application layer gateway (ALG) functionality that is used by Network Address Translation (NAT) in Cisco IOS XE Software could allow an unauthenticated, remote attacker to cause an affected device to reload. This vulnerability is due to a logic error that occurs when an affected device inspects certain TCP DNS packets. An attacker could exploit this vulnerability by sending crafted DNS packets through the affected device that is performing NAT for DNS packets. A successful exploit could allow the attacker to cause the device to reload, resulting in a denial of service (DoS) condition on the affected device. Note: This vulnerability can be exploited only by sending IPv4 TCP packets through an affected device.	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-alg-dos-KU9Z8kFX	O-CIS-IOS_-211022/4505

			physical attacker to execute unsigned code at system boot time. This vulnerability is due to an improper check in the code function that manages the verification of the digital signatures of system image files during the initial boot process. An attacker could exploit this vulnerability by loading unsigned software on an affected device. A successful exploit could allow the attacker to boot a malicious software image or execute unsigned code and bypass the image verification check part of the boot process of the affected device. To exploit this vulnerability, the attacker needs either unauthenticated physical access to the device or privileged access to the root shell on the device. Note: In Cisco IOS XE Software releases 16.11.1 and later,

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			local authenticated malicious user with admin privileges may potentially exploit this vulnerability in order to modify a UEFI variable. **CVE ID : CVE-2022-32484**		
Product: inspiron_5498_firmware					
Affected Version(s): * Up to (excluding) 1.20.0					
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32485**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5156
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32487**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5157

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32488**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5158
Improper Input Validation	12-Oct-2022	7.8	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32489**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5159
Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	12-Oct-2022	7.8	Dell Client BIOS contains a Buffer Overflow vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by manipulating an SMI to cause an arbitrary write during SMM. **CVE ID : CVE-2022-32491**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5160

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Out-of-bounds Write	12-Oct-2022	7.8	Dell BIOS contains an Stack-Based Buffer Overflow vulnerability. A local authenticated malicious user may potentially exploit this vulnerability by using an SMI to gain arbitrary code execution in SMRAM. **CVE ID : CVE-2022-32493**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5161
Improper Input Validation	12-Oct-2022	4.4	Dell BIOS contains an improper input validation vulnerability. A local authenticated malicious user with admin privileges may potentially exploit this vulnerability in order to modify a UEFI variable. **CVE ID : CVE-2022-32483**	https://www.dell.com/support/kbdoc/000203758	O-DEL-INSP-211022/5162
Improper Input Validation	12-Oct-2022	4.4	Dell BIOS contains an improper input validation vulnerability. Integer Underflow (Wrap or	10-Oct-2022	9.8	Azure RTOS USBx is a USB host, device, and on-the-go (OTG) embedded	https://github.com/azure-rtos/usbx/security/advisories	O-MIC-AZUR-211022/7015

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Wraparound)			stack, fully integrated with Azure RTOS ThreadX and available for all Azure RTOS ThreadX–supported processors. Azure RTOS USBX implementation of host support for USB CDC ECM includes an integer underflow and a buffer overflow in the `_ux_host_class_cdc_ecm_mac_address_get` function which may be potentially exploited to achieve remote code execution or denial of service. Setting mac address string descriptor length to a `0` or `1` allows an attacker to introduce an integer underflow followed (string_length) by a buffer overflow of the `cdc_ecm -> ux_host_class_cdc_ecm_node_id` array. This may allow one to redirect the code execution flow or introduce a denial of service. The fix has been included in USBX release	/GHSA-chpp-5fv9-6368, https://github.com/azure-rtos/usbx/releases/tag/v6.1.12_rel	

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			[6.1.12](https://github.com/azure-rtos/usbx/releases/tag/v6.1.12_rel). Improved mac address string descriptor length validation to check for unexpectedly small values may be used as a workaround. **CVE ID : CVE-2022-36063**

			38038, CVE-2022-38039. **CVE ID : CVE-2022-38022**		
Vendor: Nokia					
Product: airframe_bmc_web_gui_r18_firmware					
Affected Version(s): * Up to (excluding) 4.13.00					
Incorrect Authorization	12-Oct-2022	8.8	Multiple Improper Access Control was discovered in Nokia AirFrame BMC Web GUI < R18 Firmware v4.13.00. It does not properly validate requests for access to (or editing of) data and functionality in all endpoints under /#settings/* and /api/settings/*. By not verifying the permissions for access to resources, it allows a potential attacker to view pages, with sensitive data, that are not allowed, and modify system configurations also causing DoS, which should be accessed only by user with administration profile, bypassing all controls (without checking for user identity). **CVE ID : CVE-2022-28866**	N/A	O-NOK-AIRF-211022/8036

Affected devices do not properly validate the parameter of a specific GET request. This could allow an authenticated attacker to set the device to a denial of service state or to control the program counter and, thus, execute arbitrary code on the device. **CVE ID : CVE-2022-41665**

Missing Release of Memory after Effective Lifetime	11-Oct-2022	7.5	A vulnerability has been identified in Nucleus NET (All versions), Nucleus ReadyStart V3 (All versions), Nucleus Source Code (Versions including affected FTP server). The FTP server does not properly release memory resources that were reserved for incomplete connection attempts by FTP clients. This could allow a remote attacker to generate a denial of service condition on devices that incorporate a vulnerable version of the FTP server. **CVE ID : CVE-2022-38371**	https://cert-portal.siemens.com/productcert/pdf/ssa-935500.pdf, https://cert-portal.siemens.com/productcert/pdf/ssa-313313.pdf	O-SIE-DESI-211022/8304

			"Operation" web application due to the missing validation of anti-CSRF tokens or other origin checks. A remote unauthenticated attacker can upload and enable permanent arbitrary JavaScript code into the device just by convincing a victim to visit a specifically crafted webpage while logged-in to the device web application. **CVE ID : CVE-2022-40180**		
Product: logo\!8_bm_fs-05_firmware					
Affected Version(s): *					
Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	11-Oct-2022	9.8	A vulnerability has been identified in LOGO! 8 BM (incl. SIPLUS variants) (All versions). Affected devices do not properly validate the structure of TCP packets in several methods. This could allow an attacker to cause buffer overflows, get control over the instruction counter and run custom code.	https://cert-portal.siemens.com/productcert/pdf/ssa-955858.pdf	O-SIE-LOGO-211022/8358

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			exists in the "Import Files" functionality of the "Operation" web application due to the missing validation of anti-CSRF tokens or other origin checks. A remote unauthenticated attacker can upload and enable permanent arbitrary JavaScript code into the device just by convincing a victim to visit a specifically crafted webpage while logged-in to the device web application. **CVE ID : CVE-2022-40180**		
Product: ruggedcom_rm1224_firmware					
Affected Version(s): * Up to (excluding) 7.1.2					
Improper Input Validation	11-Oct-2022	8.6	A vulnerability has been identified in RUGGEDCOM RM1224 LTE(4G) EU (All versions < V7.1.2), RUGGEDCOM RM1224 LTE(4G) NAM (All versions < V7.1.2), SCALANCE M804PB (All versions < V7.1.2), SCALANCE M812-1 ADSL-Router (Annex A) (All versions < V7.1.2),	https://cert-portal.siemens.com/productcert/pdf/ssa-697140.pdf	O-SIE-RUGG-211022/8394

			S7-PLCSIM Advanced (All versions < V4.0). Affected products protect the built-in global private key in a way that cannot be considered sufficient any longer. The key is used for the legacy protection of confidential configuration data and the legacy PG/PC and HMI communication. This could allow attackers to discover the private key of a CPU product family by an offline attack against a single CPU of the family. Attackers could then use this knowledge to extract confidential configuration data from projects that are protected by that key or to perform attacks against legacy PG/PC and HMI communication. **CVE ID : CVE-2022-38465**		
Product: simatic_s7-1500_cpu_1515-2_firmware

			This vulnerability is exploitable due to a lack of authentication in the component Usb_upload.htm. **CVE ID : CVE-2022-41489**		
Vendor: wijungle					
Product: u250_firmware					
Affected Version(s): -					
Improper Restriction of Excessive Authentication Attempts	12-Oct-2022	9.8	WiJungle NGFW Version U250 was discovered to be vulnerable to No Rate Limit attack, allowing the attacker to brute force the admin password leading to Account Take Over. **CVE ID : CVE-2022-33106**	N/A	O-WIJ-U250-211022/8532
Vendor: XEN					
Product: xapi					
Affected Version(s): *					
Uncontrolled Resource Consumption	11-Oct-2022	5.3	XAPI open file limit DoS It is possible for an unauthenticated client on the network to cause XAPI to hit its file-descriptor limit. This causes XAPI to be unable to accept new requests for other (trusted) clients, and blocks XAPI from carrying	https://xenbits.xenproject.org/xsa/advisory-413.txt, http://xenbits.xen.org/xsa/advisory-413.html, http://www.openwall.com/lists/oss-security/2022/10/11/4	O-XEN-XAPI-211022/8533

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			out any tasks that require the opening of file descriptors. **CVE ID : CVE-2022-33749**		
Product: xen					
Affected Version(s): *					
Uncontrolled Resource Consumption	11-Oct-2022	3.8	Arm: unbounded memory consumption for 2nd-level page tables Certain actions require e.g. removing pages from a guest's P2M (Physical-to-Machine) mapping. When large pages are in use to map guest pages in the 2nd-stage page tables, such a removal operation may incur a memory allocation (to replace a large mapping with individual smaller ones). These memory allocations are taken from the global memory pool. A malicious guest might be able to cause the global memory pool to be exhausted by manipulating its own P2M mappings. **CVE ID : CVE-2022-33747**	https://xenbits.xenproject.org/xsa/advisory-409.txt, http://xenbits.xen.org/xsa/advisory-409.html, http://www.openwall.com/lists/oss-security/2022/10/11/5	O-XEN-XEN-211022/8534

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Affected Version(s): From (including) 4.13.0 Up to (including) 4.16.1					
Uncontrolled Resource Consumption	11-Oct-2022	6.5	P2M pool freeing may take excessively long The P2M pool backing second level address translation for guests may be of significant size. Therefore its freeing may take more time than is reasonable without intermediate preemption checks. Such checking for the need to preempt was so far missing. **CVE ID : CVE-2022-33746**	https://xenbits.xenproject.org/xsa/advisory-410.txt, http://xenbits.xen.org/xsa/advisory-410.html, http://www.openwall.com/lists/oss-security/2022/10/11/3	O-XEN-XEN-211022/8535
