Affected Version(s): * Up to (excluding) 5.1.1					

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Improper Control of Generation of Code ('Code Injection')	24-May-2023	9.8	For RocketMQ versions 5.1.0 and below, under certain conditions, there is a risk of remote command execution. Several components of RocketMQ, including NameServer, Broker, and Controller, are leaked on the extranet and lack permission verification, an attacker can exploit this vulnerability by using the update configuration function to execute commands as the system users that RocketMQ is running as. Additionally, an attacker can achieve the same effect by forging the RocketMQ protocol content. To prevent these attacks, users are recommended to upgrade to version 5.1.1 or above for using RocketMQ 5.x or 4.9.6 or	https://lists.apache.org/thread/1s8j2c8kogthtpv3060yddk03zq0pxyp	A-APA-ROCK-020623/22

Improper Neutralization of Special Elements used in an SQL	18-May-2023	6.5	A vulnerability in the web-based management interface of Cisco Smart Software Manager On-Prem (SSM On-Prem)	https://sec.cloudapps.cisco.com/security/center/content/CiscoSecurityAdvisory/cisc	A-CIS-SMAR-020623/127

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Command ('SQL Injection')			could allow an authenticated, remote attacker to conduct SQL injection attacks on an affected system. This vulnerability exists because the web-based management interface inadequately validates user input. An attacker could exploit this vulnerability by authenticating to the application as a low-privileged user and sending crafted SQL queries to an affected system. A successful exploit could allow the attacker to read sensitive data on the underlying database. **CVE ID : CVE-2023-20110**	o-sa-ssm-sql-X9MmjSYh

Vendor: dgraph					
Product: dgraph					
Affected Version(s): * Up to (excluding) 23.0.0					
Inadequate Encryption Strength	17-May-2023	5.5	Dgraph is an open source distributed GraphQL database. Existing Dgraph audit logs are vulnerable to brute force attacks due to nonce collisions. The first 12 bytes come from a baseIv which is initialized when an audit log is	https://github.com/dgraph-io/dgraph/security/advisories/GHSA-92wq-q9pq-gw47, https://github.com/dgraph-io/dgraph/pull/8323	A-DGR-DGRA-020623/156

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			created. The last 4 bytes come from the length of the log line being encrypted. This is problematic because two log lines will often have the same length, so due to these collisions we are reusing the same nonce many times. All audit logs generated by versions of Dgraph <v23.0.0 are affected. Attackers must have access to the system the logs are stored on. Dgraph users should upgrade to v23.0.0. Users unable to upgrade should store existing audit logs in a secure location and for extra security, encrypt using an external tool like `gpg`. **CVE ID : CVE-2023-31135**

			disclosure but did not respond in any way. **CVE ID : CVE-2023-2789**		
Product: emacs					
Affected Version(s): 26.1-9.el8					
Improper Neutralization of Special Elements used in a Command ('Command Injection')	17-May-2023	7.8	A flaw was found in the Emacs text editor. Processing a specially crafted org-mode code with the "org-babel-execute:latex" function in ob-latex.el can result in arbitrary command execution. This CVE exists because of a CVE-2023-28617 security regression for the emacs package in Red Hat Enterprise Linux 8.8 and Red Hat Enterprise Linux 9.2. **CVE ID : CVE-2023-2491**	N/A	A-GNU-EMAC-020623/212
Affected Version(s): 27.2-8.el9

Vendor: granthweb					
Product: go_pricing					
Affected Version(s): * Up to (including) 3.3.19					
Missing Authorization	24-May-2023	8.8	The Go Pricing - WordPress Responsive Pricing Tables plugin for WordPress is vulnerable to unauthorized modification of data due to a missing capability check on the 'process_postdata' function in versions up to, and including, 3.3.19. This makes it possible for authenticated attackers with a role that the administrator previously granted access to the plugin to modify access to the plugin when it should only be the administrator's privilege. **CVE ID : CVE-2023-2494**	N/A	A-GRA-GO_P-020623/224
Deserialization of Untrusted Data	25-May-2023	8.8	The Go Pricing - WordPress Responsive Pricing Tables plugin for WordPress is vulnerable to PHP Object Injection in	N/A	A-GRA-GO_P-020623/225

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			versions up to, and including, 3.3.19 via deserialization of untrusted input from the 'go_pricing' shortcode 'data' parameter. This allows authenticated attackers, with subscriber-level permissions and above, to inject a PHP Object. No POP chain is present in the vulnerable plugin. If a POP chain is present via an additional plugin or theme installed on the target system, it could allow the attacker to delete arbitrary files, retrieve sensitive data, or execute code. **CVE ID : CVE-2023-2500**		
N/A	24-May-2023	7.5	The Go Pricing - WordPress Responsive Pricing Tables plugin for WordPress is vulnerable to unauthorized arbitrary file uploads due to an improper capability check on the 'validate_upload' function in versions	N/A	A-GRA-GO_P-020623/226

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			up to, and including, 3.3.19. This makes it possible for authenticated attackers with a role that the administrator previously granted access to the plugin to upload arbitrary files on the affected site's server which may make remote code execution possible. **CVE ID : CVE-2023-2496**		
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	24-May-2023	5.4	The Go Pricing - WordPress Responsive Pricing Tables plugin for WordPress is vulnerable to Stored Cross-Site Scripting via shortcodes in versions up to, and including, 3.3.19 due to insufficient input sanitization and output escaping. This makes it possible for contributor-level attackers to inject arbitrary web scripts in pages that will execute whenever a user accesses an injected page.	N/A	A-GRA-GO_P-020623/227

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2023-2498		
Vendor: groundhogg					
Product: groundhogg					
Affected Version(s): * Up to (including) 2.7.9.8					
Cross-Site Request Forgery (CSRF)	20-May-2023	8	The Groundhogg plugin for WordPress is vulnerable to Cross-Site Request Forgery in versions up to, and including, 2.7.9.8. This is due to missing nonce validation in the 'ajax_edit_contact' function. This makes it possible for authenticated attackers to receive the auto login link via shortcode and then modify the assigned user to the auto login link to elevate verified user privileges via a forged request granted they can trick a site administrator into performing an action such as clicking on a link. **CVE ID : CVE-2023-2736**	N/A	A-GRO-GROU-020623/228
Missing Authorization	20-May-2023	5.4	The Groundhogg plugin for WordPress is vulnerable to unauthorized	N/A	A-GRO-GROU-020623/229

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			access of data and modification of data due to a missing capability check on the 'ajax_upload_file' function in versions up to, and including, 2.7.9.8. This makes it possible for authenticated attackers, with subscriber-level access and above, to upload a file to the contact, and then lists all the other uploaded files related to the contact. **CVE ID : CVE-2023-2716**		
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	20-May-2023	5.4	The Groundhogg plugin for WordPress is vulnerable to Stored Cross-Site Scripting via the 'gh_form' shortcode in versions up to, and including, 2.7.9.8 due to insufficient input sanitization and output escaping on user supplied attributes. This makes it possible for authenticated attackers with contributor-level and above	N/A	A-GRO-GROU-020623/230

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			permissions to inject arbitrary web scripts in pages that will execute whenever a user accesses an injected page. Please note this only works with legacy contact forms. **CVE ID : CVE-2023-2735**		
Missing Authorization	20-May-2023	4.3	The Groundhogg plugin for WordPress is vulnerable to unauthorized modification of data due to a missing capability check on the 'check_license' functions in versions up to, and including, 2.7.9.8. This makes it possible for authenticated attackers, with subscriber-level permissions and above, to change the license key and support license key, but it can only be changed to a valid license key. **CVE ID : CVE-2023-2714**	N/A	A-GRO-GROU-020623/231
Missing Authorization	20-May-2023	4.3	The Groundhogg plugin for WordPress is vulnerable to	N/A	A-GRO-GROU-020623/232

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			unauthorized modification of data due to a missing capability check on the 'submit_ticket' function in versions up to, and including, 2.7.9.8. This makes it possible for authenticated attackers to create a support ticket that sends the website's data to the plugin developer, and it is also possible to create an admin access with an auto login link that is also sent to the plugin developer with the ticket. It only works if the plugin is activated with a valid license. **CVE ID : CVE-2023-2715**		
Cross-Site Request Forgery (CSRF)	20-May-2023	4.3	The Groundhogg plugin for WordPress is vulnerable to Cross-Site Request Forgery in versions up to, and including, 2.7.9.8. This is due to missing nonce validation on the 'enable_safe_mode' function. This	N/A	A-GRO-GROU-020623/233

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			makes it possible for unauthenticated attackers to enable safe mode, which disables all other plugins, via a forged request if they can successfully trick an administrator into performing an action such as clicking on a link. A warning message about safe mode is displayed to the admin, which can be easily disabled. **CVE ID : CVE-2023-2717**		
Vendor: guest_management_system_project					
Product: guest_management_system

Vendor: Libreswan					
Product: libreswan					
Affected Version(s): 4.9-1.el8					
N/A	17-May-2023	7.5	A vulnerability was found in the libreswan library. This security issue occurs when an IKEv1 Aggressive Mode packet is received with only unacceptable crypto algorithms, and the response packet is not sent with a zero responder SPI. When a subsequent packet is received where the sender reuses the libreswan responder SPI as its own initiator SPI, the pluto daemon state machine crashes. No remote code execution is possible. This CVE exists because of a CVE-2023-30570 security regression for libreswan package in Red Hat Enterprise Linux 8.8 and Red Hat Enterprise Linux 9.2.	N/A	A-LIB-LIBR-020623/309

Vendor: ombi					
Product: ombi					
Affected Version(s): * Up to (excluding) 4.38.2					
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	18-May-2023	4.9	Ombi is an open source application which allows users to request specific media from popular self-hosted streaming servers. Versions prior to 4.38.2 contain an arbitrary file read vulnerability where an Ombi administrative user may access files available to the Ombi server process on the host operating system. Ombi administrators may not always be local system administrators and so this may violate the security expectations of the system. The arbitrary file read vulnerability was present in `ReadLogFile` and `Download` endpoints in `SystemControllers.	https://github.com/Ombi-app/Ombi/commit/b8a8f029d80454d582bc4a2a05175106809335d0	A-OMB-OMBI-020623/394

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			cs` as the parameter `logFileName` is not sanitized before being combined with the `Logs` directory. When using `Path.Combine(arg 1, arg2, arg3)`, an attacker may be able to escape to folders/files outside of `Path.Combine(arg 1, arg2)` by using ".." in `arg3`. In addition, by specifying an absolute path for `arg3`, `Path.Combine` will completely ignore the first two arguments and just return just `arg3`. This vulnerability can lead to information disclosure. The Ombi `documentation` suggests running Ombi as a Service with Administrator privileges. An attacker targeting such an application may be able to read the files of any Windows user on the host machine and certain system files. This issue has

Vendor: reactphp					
Product: http					
Affected Version(s): From (including) 0.8.0 Up to (excluding) 1.9.0					
N/A	17-May-2023	5.3	react/http is an event-driven, streaming HTTP client and server implementation for ReactPHP. Previous versions of ReactPHP's HTTP server component contain a potential DoS vulnerability that can cause high CPU load when processing large HTTP request bodies. This vulnerability has little to no impact on the default configuration, but can be exploited when explicitly using the RequestBodyBuffer Middleware with very large settings. This might lead to consuming large amounts of CPU time for processing requests and significantly delay or slow down the	https://github.com/reactphp/http/commit/9681f764b80c45ebfb5fe2ea7da5bd3babfcdcfd, https://github.com/reactphp/http/security/advisories/GHSA-95x4-j7vc-h8mf	A-REA-HTTP-020623/433

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			processing of legitimate user requests. This issue has been addressed in release 1.9.0. Users are advised to upgrade. Users unable to upgrade may keep the request body limited using RequestBodyBuffer Middleware with a sensible value which should mitigate the issue. An infrastructure or DevOps workaround could be to place a reverse proxy in front of the ReactPHP HTTP server to filter out any excessive HTTP request bodies. **CVE ID : CVE-2023-26044**

Vendor: teltonika					
Product: remote_management_system					
Affected Version(s): * Up to (excluding) 4.10.0					
Improper Authentication	22-May-2023	9.8	Teltonika's Remote Management System versions prior to 4.10.0 use device serial numbers and MAC addresses to identify devices from the user perspective for device claiming and from the device perspective for authentication. If an attacker obtained the serial number and MAC address of a device, they could authenticate as that device and steal communication credentials of the device. This could	N/A	A-TEL-REMO-020623/498

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			allow an attacker to enable arbitrary command execution as root by utilizing management options within the newly registered devices. **CVE ID : CVE-2023-32347**		
Inclusion of Web Functionality from an Untrusted Source	22-May-2023	8.8	Teltonika's Remote Management System versions prior to 4.10.0 have a feature allowing users to access managed devices' local secure shell (SSH)/web management services over the cloud proxy. A user can request a web proxy and obtain a URL in the Remote Management System cloud subdomain. This URL could be shared with others without Remote Management System authentication . An attacker could exploit this vulnerability to create a malicious	N/A	A-TEL-REMO-020623/499

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			webpage that uses a trusted and certified domain. An attacker could initiate a reverse shell when a victim connects to the malicious webpage, achieving remote code execution on the victim device. **CVE ID : CVE-2023-2588**		
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	22-May-2023	8.3	Teltonika's Remote Management System versions prior to 4.10.0 contain a cross-site scripting (XSS) vulnerability in the main page of the web interface. An attacker with the MAC address and serial number of a connected device could send a maliciously crafted JSON file with an HTML object to trigger the vulnerability. This could allow the attacker to execute scripts in the account context and obtain remote code execution on managed devices.	N/A	A-TEL-REMO-020623/500

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2023-2587		
Observable Response Discrepancy	22-May-2023	5.3	Teltonika's Remote Management System versions prior to 4.10.0 contain a function that allows users to claim their devices. This function returns information based on whether the serial number of a device has already been claimed, the MAC address of a device has already been claimed, or whether the attempt to claim a device was successful. An attacker could exploit this to create a list of the serial numbers and MAC addresses of all devices cloud-connected to the Remote Management System. **CVE ID : CVE-2023-32346**	N/A	A-TEL-REMO-020623/501
Affected Version(s): 4.14.0					

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Improper Authentication	22-May-2023	9.8	Teltonika's Remote Management System versions 4.14.0 is vulnerable to an unauthorized attacker registering previously unregistered devices through the RMS platform. If the user has not disabled the "RMS management feature" enabled by default, then an attacker could register that device to themselves. This could enable the attacker to perform different operations on the user's devices, including remote code execution with 'root' privileges (using the 'Task Manager' feature on RMS). **CVE ID : CVE-2023-2586**	N/A	A-TEL-REMO-020623/502

Product: Zulip					
Affected Version(s): * Up to (excluding) 6.2					
Missing Authorization	19-May-2023	3.7	Zulip is an open-source team collaboration tool with unique topic-based threading. In the event that 1: `ZulipLDAPAuthBackend` and an external authentication backend (any aside of `ZulipLDAPAuthBackend` and `EmailAuthBackend`) are the only ones enabled in `AUTHENTICATION_BACKENDS` in `/etc/zulip/settings.py` and 2: The organization permissions don't require invitations to join. An attacker can create a new account in the organization with an arbitrary email address in their control that's not in	https://github.com/zulip/zulip/commit/3df1b4dd7c210c21deb6f829df19412b74573f8d	A-ZUL-ZULI-020623/603

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			the organization's LDAP directory. The impact is limited to installations which have this specific combination of authentication backends as described above in addition to having `Invitations are required for joining this organization` organization permission disabled. This issue has been addressed in version 6.2. Users are advised to upgrade. Users unable to upgrade may enable the `Invitations are required for joining this organization` organization permission to prevent this issue. **CVE ID : CVE-2023-28623**		
Missing Authorization	19-May-2023	3.1	Zulip is an open-source team collaboration tool with unique topic-based threading. Zulip administrators can configure Zulip to limit who can add users to streams, and separately to limit who can invite	https://github.com/zulip/zulip/commit/7c2693a2c64904d1d0af8503b57763943648cbe5	A-ZUL-ZULI-020623/604

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
			users to the organization. In Zulip Server 6.1 and below, the UI which allows a user to invite a new user also allows them to set the streams that the new user is invited to -- even if the inviting user would not have permissions to add an existing user to streams. While such a configuration is likely rare in practice, the behavior does violate security-related controls. This does not let a user invite new users to streams they cannot see, or would not be able to add users to if they had that general permission. This issue has been addressed in version 6.2. Users are advised to upgrade. Users unable to upgrade may limit sending of invitations down to users who also have the permission to add users to streams. **CVE ID : CVE-2023-32677**

Weakness	Publish Date	CVSSv3	Description & CVE ID	Patch	NCIIPC ID
Authenticity			Snap One OvrC Pro devices versions 7.2 and prior do not validate firmware updates correctly. The device only calculates the MD5 hash of the firmware and does not check using a private-public key mechanism. The lack of complete PKI system firmware signature could allow attackers to upload arbitrary firmware updates, resulting in code execution.

Affected Version(s): -					
Out-of-bounds Write	22-May-2023	7.8	Dell PowerEdge 14G server BIOS versions prior to 2.18.1 and Dell Precision BIOS versions prior to 2.18.2, contain an Out of Bounds write vulnerability. A local attacker with low privileges could potentially exploit this vulnerability leading to exposure of some SMRAM stack/data/code in System Management Mode, leading to arbitrary code execution or escalation of privilege. **CVE ID : CVE-2023-25537**	https://www.dell.com/support/kbdoc/en-us/000213550/dsa-2023-098-security-update-for-dell-poweredge-14g-server-bios-for-an-out-of-bounds-write-vulnerability	H-DEL-POWE-020623/2759
Vendor: Dlink					
Product: dir-300
