Application					
Adobe					
connect					
Deserialization of Untrusted Data	21-Oct-21	7.5	Adobe Connect version 11.2.2 (and earlier) is affected by a Deserialization of Untrusted Data vulnerability to achieve arbitrary method invocation when AMF messages are deserialized on an Adobe Connect server. An attacker can leverage this to execute remote code execution on the server. **CVE ID : CVE-2021-40719**	https://helpx.adobe.com/security/products/connect/apsb21-91.html	A-ADO-CONN-031121/1
Advantech					
webaccess					
Out-of-bounds Write	18-Oct-21	7.5	Advantech WebAccess versions 9.02 and prior are vulnerable to a stack-based buffer overflow, which may allow an attacker to remotely execute code. **CVE ID : CVE-2021-38389**	N/A	A-ADV-WEBA-031121/2
Out-of-bounds Write	18-Oct-21	7.5	Advantech WebAccess versions 9.02 and prior are vulnerable to a heap-based buffer overflow, which may allow an attacker to remotely execute code. **CVE ID : CVE-2021-33023**	N/A	A-ADV-WEBA-031121/3
webaccess\\/nms

Improper Authentication	27-Oct-21	5	WebAccess/NMS (Versions prior to v3.0.3_Build6299) has an improper authentication vulnerability, which may allow unauthorized users to view resources monitored and controlled by the WebAccess/NMS, as well as IP addresses and names of all the devices managed via WebAccess/NMS. **CVE ID : CVE-2021-32951**	https://us-cert.cisa.gov/ics/advisories/icsa-21-229-02	A-ADV-WEBA-031121/4
Alfresco					
alfresco_content_services					
Exposure of Resource to Wrong Sphere	21-Oct-21	6.5	An issue was discovered in Hyland org.alfresco:alfresco-content-services through 7.0.1.2. Script Action execution allows executing scripts uploaded outside of the Data Dictionary. This could allow a logged-in attacker to execute arbitrary code inside a sandboxed environment. **CVE ID : CVE-2021-41790**	N/A	A-ALF-ALFR-031121/5
Server-Side Request Forgery (SSRF)	21-Oct-21	5	An issue was discovered in Hyland org.alfresco:alfresco-content-services through 6.2.2.18 and org.alfresco:alfresco-transform-services through 1.3. A crafted HTML file, once uploaded, could trigger an unexpected request by the transformation engine. The response to the request is not available to the	N/A	A-ALF-ALFR-031121/6

			attacker, i.e., this is blind SSRF. **CVE ID : CVE-2021-41792**		
alfresco_transform_services					
Server-Side Request Forgery (SSRF)	21-Oct-21	5	An issue was discovered in Hyland org.alfresco:alfresco-content-services through 6.2.2.18 and org.alfresco:alfresco-transform-services through 1.3. A crafted HTML file, once uploaded, could trigger an unexpected request by the transformation engine. The response to the request is not available to the attacker, i.e., this is blind SSRF. **CVE ID : CVE-2021-41792**	N/A	A-ALF-ALFR-031121/7
community_share					
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	21-Oct-21	3.5	An issue was discovered in Hyland org.alfresco:share through 7.0.0.2 and org.alfresco:community-share through 7.0. An evasion of the XSS filter for HTML input validation in the Alfresco Share User Interface leads to stored XSS that could be exploited by an attacker (given that he has privileges on the content collaboration features). **CVE ID : CVE-2021-41791**	N/A	A-ALF-COMM-031121/8
share					
Improper Neutralization of Input	21-Oct-21	3.5	An issue was discovered in Hyland org.alfresco:share through 7.0.0.2 and	N/A	A-ALF-SHAR-031121/9

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
During Web Page Generation ('Cross-site Scripting')			org.alfresco:community-share through 7.0. An evasion of the XSS filter for HTML input validation in the Alfresco Share User Interface leads to stored XSS that could be exploited by an attacker (given that he has privileges on the content collaboration features). **CVE ID : CVE-2021-41791**		
Alkacon					
opencms					
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	19-Oct-21	3.5	In "OpenCMS", versions 10.5.0 to 11.0.2 are affected by a stored XSS vulnerability that allows low privileged application users to store malicious scripts in the Sitemap functionality. These scripts are executed in a victim's browser when they open the page containing the vulnerable field. **CVE ID : CVE-2021-25968**	https://github.com/alkacon/mercury-template/commit/800945f5d02346c633c7aef9f5d596d7dedc8fb5	A-ALK-OPEN-031121/10
Amazon					
tough					
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	19-Oct-21	8.5	Tough provides a set of Rust libraries and tools for using and generating the update framework (TUF) repositories. The tough library, prior to 0.12.0, does not properly sanitize target names when caching a repository, or when saving specific targets to an output directory. When targets are	https://github.com/awslabs/tough/security/advisories/GHSA-x3r5-q6mj-m485, https://github.com/awslabs/tough/commit/1809b	A-AMA-TOUG-031121/11

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			cached or saved, files could be overwritten with arbitrary content anywhere on the system. A fix is available in version 0.12.0. No workarounds to this issue are known. **CVE ID : CVE-2021-41149**	9bd1106d78a51fbea3071aa97a3530bac9a	
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	19-Oct-21	3.5	Tough provides a set of Rust libraries and tools for using and generating the update framework (TUF) repositories. The tough library, prior to 0.12.0, does not properly sanitize delegated role names when caching a repository, or when loading a repository from the filesystem. When the repository is cached or loaded, files ending with the .json extension could be overwritten with role metadata anywhere on the system. A fix is available in version 0.12.0. No workarounds to this issue are known. **CVE ID : CVE-2021-41150**	https://github.com/awslabs/tough/security/advisories/GHSA-r56q-vv3c-6g9c, https://github.com/awslabs/tough/commit/1809b9bd1106d78a51fbea3071aa97a3530bac9a	A-AMA-TOUG-031121/12
anaconda					
dask					
Exposure of Resource to Wrong Sphere	26-Oct-21	6.8	An issue was discovered in Dask (aka python-dask) through 2021.09.1. Single machine Dask clusters started with dask.distributed.LocalCluster or dask.distributed.Client (which defaults to using	https://docs.dask.org/en/latest/changelog.html	A-ANA-DASK-031121/13

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			LocalCluster) would mistakenly configure their respective Dask workers to listen on external interfaces (typically with a randomly selected high port) rather than only on localhost. A Dask cluster created using this method (when running on a machine that has an applicable port exposed) could be used by a sophisticated attacker to achieve remote code execution. **CVE ID : CVE-2021-42343**		
antsword_redis_project					
antsword_redis					
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	26-Oct-21	3.5	AS_Redis is an AntSword plugin for Redis. The Redis Manage plugin for AntSword prior to version 0.5 is vulnerable to Self-XSS due to due to insufficient input validation and sanitization via redis server configuration. Self-XSS in the plugin configuration leads to code execution. This issue is patched in version 0.5. **CVE ID : CVE-2021-41172**	https://github.com/Medicean/AS_Redis/security/advisories/GHSA-j8j6-f829-w425	A-ANT-ANTS-031121/14
Apache					
storm					
Improper Neutralization of Special Elements in Output Used	25-Oct-21	7.5	A Command Injection vulnerability exists in the getTopologyHistory service of the Apache Storm 2.x prior to 2.2.1 and Apache	https://lists.apache.org/thread.html/r5fe881f6ca883908b7a0f	A-APA-STOR-031121/15

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
by a Downstream Component ('Injection')			Storm 1.x prior to 1.2.4. A specially crafted thrift request to the Nimbus server allows Remote Code Execution (RCE) prior to authentication. **CVE ID : CVE-2021-38294**	005d35115af49f43beea7a8b0915e377859%40%3Cuser.storm.apache.org%3E	
Deserialization of Untrusted Data	25-Oct-21	7.5	An Unsafe Deserialization vulnerability exists in the worker services of the Apache Storm supervisor server allowing pre-auth Remote Code Execution (RCE). Apache Storm 2.2.x users should upgrade to version 2.2.1 or 2.3.0. Apache Storm 2.1.x users should upgrade to version 2.1.1. Apache Storm 1.x users should upgrade to version 1.2.4 **CVE ID : CVE-2021-40865**	https://lists.apache.org/thread.html/r8d45e74299897b6734dd0f788c46a631009ce2eeb731523386f7a253%40%3Cuser.storm.apache.org%3E	A-APA-STOR-031121/16
superset					
Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')	18-Oct-21	6	Apache Superset up to and including 1.3.0 when configured with ENABLE_TEMPLATE_PROCESSING on (disabled by default) allowed SQL injection when a malicious authenticated user sends an http request with a custom URL. **CVE ID : CVE-2021-41971**	https://lists.apache.org/thread.html/rf7292731268c6c6e2196ae1583e32ac7189385364268f8d9215e8e6d%40%3Cdev.superset.apache.org%3E	A-APA-SUPE-031121/17
Improper Neutralization of Input During Web	18-Oct-21	3.5	Apache Superset up to and including 1.1 does not sanitize titles correctly on the Explore page. This allows	https://lists.apache.org/thread.html/r2c09254e98	A-APA-SUPE-031121/18

Injection')			privileges. For more information about these vulnerabilities, see the Details section of this advisory. **CVE ID : CVE-2021-34756**	cmdinject-FmzsLN8	
Improper Input Validation	27-Oct-21	6.6	A vulnerability in Cisco Firepower Threat Defense (FTD) Software could allow an authenticated, local attacker to overwrite or append arbitrary data to system files using root-level privileges. The attacker must have administrative credentials on the device. This vulnerability is due to incomplete validation of user input for a specific CLI command. An attacker could exploit this vulnerability by authenticating to the device with administrative privileges and issuing a CLI command with crafted user parameters. A successful exploit could allow the attacker to overwrite or append arbitrary data to system files using root-level privileges. **CVE ID : CVE-2021-34761**	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-ftd-file-write-SHVcmQVc	A-CIS-SOUR-031121/127
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	27-Oct-21	5.5	A vulnerability in the web-based management interface of Cisco Firepower Management Center (FMC) Software could allow an authenticated, remote attacker to perform a directory traversal attack on	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-fmc-dir-traversal-	A-CIS-SOUR-031121/128

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			an affected device. The attacker would require valid device credentials. The vulnerability is due to insufficient input validation of the HTTPS URL by the web-based management interface. An attacker could exploit this vulnerability by sending a crafted HTTPS request that contains directory traversal character sequences to an affected device. A successful exploit could allow the attacker to read or write arbitrary files on the device. **CVE ID : CVE-2021-34762**	95UyW5tk	
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	27-Oct-21	3.5	Multiple vulnerabilities in the web-based management interface of Cisco Firepower Management Center (FMC) Software could allow an attacker to execute a cross-site scripting (XSS) attack or an open redirect attack. For more information about these vulnerabilities, see the Details section of this advisory. **CVE ID : CVE-2021-34763**	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-fmc-xss-openredir-TVPMWJyg	A-CIS-SOUR-031121/129
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	27-Oct-21	5.8	Multiple vulnerabilities in the web-based management interface of Cisco Firepower Management Center (FMC) Software could allow an attacker to execute a cross-site scripting (XSS) attack or an open redirect attack. evm					
Always-Incorrect Control Flow Implementation	18-Oct-21	7.5	The evm crate is a pure Rust implementation of Ethereum Virtual Machine. In `evm` crate `< 0.31.0`, `JUMPI` opcode's condition is checked after the destination	https://github.com/rust-blockchain/evm/pull/67, https://github.com/rust-	A-EVM-EVM-031121/168

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			validity check. However, according to Geth and OpenEthereum, the condition check should happen before the destination validity check. This is a **high** severity security advisory if you use `evm` crate for Ethereum mainnet. In this case, you should update your library dependency immediately to on or after `0.31.0`. This is a **low** severity security advisory if you use `evm` crate in Frontier or in a standalone blockchain, because there's no security exploit possible with this advisory. It is **not** recommended to update to on or after `0.31.0` until all the normal chain upgrade preparations have been done. If you use Frontier or other `pallet-evm` based Substrate blockchain, please ensure to update your `spec_version` before updating this. For other blockchains, please make sure to follow a hard-fork process before you update this. **CVE ID : CVE-2021-41153**	blockchain/evm/security/advisories/GHSA-pvh2-pj76-4m96

			(RDP), released under the Apache license. In affected versions a malicious server might trigger out of bound writes in a connected client. Connections using GDI or SurfaceCommands to send graphics updates to the client might send `0` width/height or out of bound rectangles to trigger out of bound writes. With `0` width or heigth the memory allocation will be `0` but the missing bounds checks allow writing to the pointer at this (not allocated) region. This issue has been patched in FreeRDP 2.4.1. **CVE ID : CVE-2021-41160**	/security/advisories/GHSA-7c9r-6r2q-93qg	
Freeswitch					
freeswitch					
N/A	25-Oct-21	5	FreeSWITCH is a Software Defined Telecom Stack enabling the digital transformation from proprietary telecom switches to a software implementation that runs on any commodity hardware. When handling SRTP calls, FreeSWITCH prior to version 1.10.7 is susceptible to a DoS where calls can be terminated by remote attackers. This attack can be done continuously, thus denying encrypted calls during the attack. When a media port that is handling	https://github.com/signalwire/freeswitch/security/advisories/GHSA-jh42-prph-gp36	A-FRE-FREE-031121/182

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			SRTP traffic is flooded with a specially crafted SRTP packet, the call is terminated leading to denial of service. This issue was reproduced when using the SDES key exchange mechanism in a SIP environment as well as when using the DTLS key exchange mechanism in a WebRTC environment. The call disconnection occurs due to line 6331 in the source file `switch_rtp.c`, which disconnects the call when the total number of SRTP errors reach a hard-coded threshold (100). By abusing this vulnerability, an attacker is able to disconnect any ongoing calls that are using SRTP. The attack does not require authentication or any special foothold in the caller's or the callee's network. This issue is patched in version 1.10.7. **CVE ID : CVE-2021-41105**		
Uncontrolled Resource Consumption	25-Oct-21	5	Software Defined Telecom Stack enabling the digital transformation from proprietary telecom switches to a software implementation that runs on any commodity hardware. FreeSWITCH prior to version 1.10.7 is susceptible to Denial of Service via SIP flooding. When flooding FreeSWITCH with SIP	https://github.com/signalwire/freeswitch/security/advisories/GHSA-jvpq-23v4-gp3m	A-FRE-FREE-031121/183

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			messages, it was observed that after a number of seconds the process was killed by the operating system due to memory exhaustion. By abusing this vulnerability, an attacker is able to crash any FreeSWITCH instance by flooding it with SIP messages, leading to Denial of Service. The attack does not require authentication and can be carried out over UDP, TCP or TLS. This issue was patched in version 1.10.7. **CVE ID : CVE-2021-41145**		
Improper Authentication	26-Oct-21	5	FreeSWITCH is a Software Defined Telecom Stack enabling the digital transformation from proprietary telecom switches to a software implementation that runs on any commodity hardware. By default, SIP requests of the type SUBSCRIBE are not authenticated in the affected versions of FreeSWITCH. Abuse of this security issue allows attackers to subscribe to user agent event notifications without the need to authenticate. This abuse poses privacy concerns and might lead to social engineering or similar attacks. For example, attackers may be able to	https://github.com/signalwire/freeswitch/security/advisories/GHSA-g7xg-7c54-rmpj, https://github.com/signalwire/freeswitch/commit/b21dd4e7f3a6f1d5f7be3ea500a319a5bc11db9e	A-FRE-FREE-031121/184

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			monitor the status of target SIP extensions. Although this issue was fixed in version v1.10.6, installations upgraded to the fixed version of FreeSWITCH from an older version, may still be vulnerable if the configuration is not updated accordingly. Software upgrades do not update the configuration by default. SIP SUBSCRIBE messages should be authenticated by default so that FreeSWITCH administrators do not need to explicitly set the `auth-subscriptions` parameter. When following such a recommendation, a new parameter can be introduced to explicitly disable authentication. **CVE ID : CVE-2021-41157**		
Exposure of Sensitive Information to an Unauthorized Actor	26-Oct-21	5	FreeSWITCH is a Software Defined Telecom Stack enabling the digital transformation from proprietary telecom switches to a software implementation that runs on any commodity hardware. Prior to version 1.10.7, an attacker can perform a SIP digest leak attack against FreeSWITCH and receive the challenge response of a gateway configured on the FreeSWITCH server. This is done by challenging	https://github.com/signalwire/freeswitch/security/advisories/GHSA-3v3f-99mv-qvj4, http://seclists.org/fulldisclosure/2021/Oct/40	A-FRE-FREE-031121/185

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			FreeSWITCH's SIP requests with the realm set to that of the gateway, thus forcing FreeSWITCH to respond with the challenge response which is based on the password of that targeted gateway. Abuse of this vulnerability allows attackers to potentially recover gateway passwords by performing a fast offline password cracking attack on the challenge response. The attacker does not require special network privileges, such as the ability to sniff the FreeSWITCH's network traffic, to exploit this issue. Instead, what is required for this attack to work is the ability to cause the victim server to send SIP request messages to the malicious party. Additionally, to exploit this issue, the attacker needs to specify the correct realm which might in some cases be considered secret. However, because many gateways are actually public, this information can easily be retrieved. The vulnerability appears to be due to the code which handles challenges in `sofia_reg.c`, `sofia_reg_handle_sip_r_challenge()` which does not check if the challenge is originating from the actual gateway. The		

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			lack of these checks allows arbitrary UACs (and gateways) to challenge any request sent by FreeSWITCH with the realm of the gateway being targeted. This issue is patched in version 10.10.7. Maintainers recommend that one should create an association between a SIP session for each gateway and its realm to make a check be put into place for this association when responding to challenges. **CVE ID : CVE-2021-41158**

libtpms					
Improper Restriction of Operations within the Bounds of a Memory Buffer	19-Oct-21	7.1	A flaw was found in the libtpms code that may cause access beyond the boundary of internal buffers. The vulnerability is triggered by specially-crafted TPM2 command packets that then trigger the issue when the state of the TPM2's volatile state is written. The highest threat from this vulnerability is to system availability. This issue affects libtpms versions before 0.8.5, before 0.7.9 and before 0.6.6. **CVE ID : CVE-2021-3746**	https://bugzilla.redhat.com/show_bug.cgi?id=1998588	A-LIB-LIBT-031121/253

Improper Limitation of a Pathname to a Restricted Directory ('Path	18-Oct-21	4	Backstage is an open platform for building developer portals. In affected versions A malicious actor could read sensitive files from the environment where Scaffolder Tasks are run. The attack is executed	https://github.com/backstage/backstage/security/advisories/GHSA-pvv8-8fx9-h673, https://githu	A-LIN-BACK-031121/254

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
Traversal')			by crafting a custom Scaffolder template with a `github:publish:pull-request` action and a particular source path. When the template is executed the sensitive files would be included in the published pull request. This vulnerability is mitigated by the fact that an attacker would need access to create and register templates in the Backstage catalog, and that the attack is very visible given that the exfiltration happens via a pull request. The vulnerability is patched in the `0.15.9` release of `@backstage/plugin-scaffolder-backend`. **CVE ID : CVE-2021-41151**	b.com/backstage/backstage/commit/6968962c920508eae19a4c1c200fa2c8980a4006	
the_update_framework					
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	19-Oct-21	8.8	python-tuf is a Python reference implementation of The Update Framework (TUF). In both clients (`tuf/client` and `tuf/ngclient`), there is a path traversal vulnerability that in the worst case can overwrite files ending in `.json` anywhere on the client system on a call to `get_one_valid_targetinfo()`. It occurs because the rolename is used to form the filename, and may contain path traversal characters (ie `../../name.json`). The impact	https://github.com/theupdateframework/python-tuf/commit/4ad7ae48fda594b640139c3b7eae21ed5155a102, https://github.com/theupdateframework/python-tuf/security/advisories/GHSA-wjw6-2cqr-j4qr	A-LIN-THE_-031121/255

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			is mitigated by a few facts: It only affects implementations that allow arbitrary rolename selection for delegated targets metadata, The attack requires the ability to A) insert new metadata for the path-traversing role and B) get the role delegated by an existing targets metadata, The written file content is heavily restricted since it needs to be a valid, signed targets file. The file extension is always .json. A fix is available in version 0.19 or newer. There are no workarounds that do not require code changes. Clients can restrict the allowed character set for rolenames, or they can store metadata in files named in a way that is not vulnerable: neither of these approaches is possible without modifying python-tuf. **CVE ID : CVE-2021-41131**

N/A	20-Oct-21	5	Vulnerability in the Java SE, Oracle GraalVM Enterprise Edition product of Oracle Java SE (component: JSSE). Supported versions that are affected are Java SE: 7u311, 8u301, 11.0.12; Oracle GraalVM Enterprise Edition: 20.3.3 and 21.2.0. Easily exploitable vulnerability allows unauthenticated attacker with network access via TLS to compromise Java SE, Oracle GraalVM Enterprise Edition. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE, Oracle GraalVM Enterprise Edition. Note: This vulnerability can only be exploited by supplying data to APIs in the specified Component without using Untrusted Java Web Start applications or Untrusted Java applets, such as through a web service. CVSS 3.1 Base Score 5.3 (Availability impacts). CVSS Vector: (CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:N/I:N/A:L). **CVE ID : CVE-2021-35565**	https://www.oracle.com/security-alerts/cpuoct2021.html, https://security.netapp.com/advisory/ntap-20211022-0004/	A-NET-ONCO-031121/319

			Edition product of Oracle Java SE (component: Libraries). Supported versions that are affected are Java SE: 8u301, 11.0.12, 17; Oracle GraalVM Enterprise Edition: 20.3.3 and 21.2.0. Easily exploitable vulnerability allows low privileged attacker with network access via Kerberos to compromise Java SE, Oracle GraalVM Enterprise Edition. Successful attacks require human interaction from a person other than the attacker and while the vulnerability is in Java SE, Oracle GraalVM Enterprise Edition, attacks may significantly impact additional products. Successful attacks of this vulnerability can result in unauthorized access to critical data or complete access to all Java SE, Oracle GraalVM Enterprise Edition accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. netty					
netty					
Uncontrolled Resource Consumption	19-Oct-21	5	The Bzip2 decompression decoder function doesn't allow setting size restrictions on the decompressed output data (which affects the allocation size used during decompression). All users of Bzip2Decoder are affected. The malicious input can trigger an OOME and so a DoS attack **CVE ID : CVE-2021-37136**	N/A	A-NET-NETT-031121/443
Uncontrolled Resource Consumption	19-Oct-21	5	The Snappy frame decoder function doesn't restrict the chunk length which may lead to excessive memory usage. Beside this it also may buffer	N/A	A-NET-NETT-031121/444

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			reserved skippable chunks until the whole chunk was received which may lead to excessive memory usage as well. This vulnerability can be triggered by supplying malicious input that decompresses to a very big size (via a network stream or a file) or by sending a huge skippable chunk. **CVE ID : CVE-2021-37137**		
Nextcloud					
contacts					
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	25-Oct-21	3.5	Nextcloud is an open-source, self-hosted productivity platform. The Nextcloud Contacts application prior to version 4.0.3 was vulnerable to a stored Cross-Site Scripting (XSS) vulnerability. For exploitation, a user would need to right-click on a malicious file and open the file in a new tab. Due the strict Content-Security-Policy shipped with Nextcloud, this issue is not exploitable on modern browsers supporting Content-Security-Policy. It is recommended that the Nextcloud Contacts application is upgraded to 4.0.3. As a workaround, one may use a browser that has support for Content-Security-Policy. **CVE ID : CVE-2021-39221**	https://github.com/nextcloud/security-advisories/security/advisories/GHSA-j6cx-mxqf-f9vc	A-NEX-CONT-031121/445

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
deck					
Incorrect Authorization	25-Oct-21	5.5	Nextcloud is an open-source, self-hosted productivity platform. A missing permission check in Nextcloud Deck before 1.2.9, 1.4.5 and 1.5.3 allows another authenticated users to access Deck cards of another user. It is recommended that the Nextcloud Deck App is upgraded to 1.2.9, 1.4.5 or 1.5.3. There are no known workarounds aside from upgrading. **CVE ID : CVE-2021-39225**	https://github.com/nextcloud/security-advisories/security/advisories/GHSA-2x96-38qg-3m72, https://github.com/nextcloud/deck/pull/3316	A-NEX-DECK-031121/446
mail					
Exposure of Sensitive Information to an Unauthorized Actor	25-Oct-21	3.5	Nextcloud is an open-source, self-hosted productivity platform The Nextcloud Mail application prior to versions 1.10.4 and 1.11.0 does by default not render images in emails to not leak the read state or user IP. The privacy filter failed to filter images with a relative protocol. It is recommended that the Nextcloud Mail application is upgraded to 1.10.4 or 1.11.0. There are no known workarounds aside from upgrading. **CVE ID : CVE-2021-39220**	https://github.com/nextcloud/mail/pull/5470, https://github.com/nextcloud/security-advisories/security/advisories/GHSA-6q9v-wm8r-rcv5	A-NEX-MAIL-031121/447
nextcloud_server					
Improper Control of Interaction	25-Oct-21	5.5	Nextcloud is an open-source, self-hosted productivity platform. Prior to versions	https://github.com/nextcloud/security	A-NEX-NEXT-031121/448

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
Frequency			20.0.13, 21.0.5, and 22.2.0, Nextcloud Server did not implement a database backend for rate-limiting purposes. Any component of Nextcloud using rate-limits (as as `AnonRateThrottle` or `UserRateThrottle`) was thus not rate limited on instances not having a memory cache backend configured. In the case of a default installation, this would notably include the rate-limits on the two factor codes. It is recommended that the Nextcloud Server be upgraded to 20.0.13, 21.0.5, or 22.2.0. As a workaround, enable a memory cache backend in `config.php`. **CVE ID : CVE-2021-41177**	-advisories/security/advisories/GHSA-fj39-4qx4-m3f2, https://github.com/nextcloud/server/pull/28728	
officeonline					
N/A	25-Oct-21	5	Nextcloud is an open-source, self-hosted productivity platform. The Nextcloud OfficeOnline application prior to version 1.1.1 returned verbatim exception messages to the user. This could result in a full path disclosure on shared files. (e.g. an attacker could see that the file `shared.txt` is located within `/files/$username/Myfolder/Mysubfolder/shared.txt`). It is recommended that the OfficeOnline application is upgraded to 1.1.1. As a	https://github.com/nextcloud/security-advisories/security/advisories/GHSA-56wm-r6jm-3v9h, https://github.com/nextcloud/officeonline/pull/204	A-NEX-OFFI-031121/449

			workaround, one may disable the OfficeOnline application in the app settings. **CVE ID : CVE-2021-39224**		
richdocuments					
N/A	25-Oct-21	5	Nextcloud is an open-source, self-hosted productivity platform. The Nextcloud Richdocuments application prior to versions 3.8.6 and 4.2.3 returned verbatim exception messages to the user. This could result in a full path disclosure on shared files. (e.g. an attacker could see that the file `shared.txt` is located within `/files/$username/Myfolder/Mysubfolder/shared.txt`). It is recommended that the Richdocuments application is upgraded to 3.8.6 or 4.2.3. As a workaround, disable the Richdocuments application in the app settings. **CVE ID : CVE-2021-39223**	https://github.com/nextcloud/richdocuments/pull/1760, https://github.com/nextcloud/security-advisories/security/advisories/GHSA-rjcc-4cgj-6v93	A-NEX-RICH-031121/450
server					
Unrestricted Upload of File with Dangerous Type	25-Oct-21	4	Nextcloud is an open-source, self-hosted productivity platform. Prior to versions 20.0.13, 21.0.5, and 22.2.0, a file traversal vulnerability makes an attacker able to download arbitrary SVG images from the host system, including user provided files. This could also be leveraged into a XSS/phishing attack,	https://github.com/nextcloud/server/pull/28726, https://github.com/nextcloud/security-advisories/security/advisories/GHSA-	A-NEX-SERV-031121/451

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			an attacker could upload a malicious SVG file that mimics the Nextcloud login form and send a specially crafted link to victims. The XSS risk here is mitigated due to the fact that Nextcloud employs a strict Content-Security-Policy disallowing execution of arbitrary JavaScript. It is recommended that the Nextcloud Server be upgraded to 20.0.13, 21.0.5 or 22.2.0. There are no known workarounds aside from upgrading. **CVE ID : CVE-2021-41178**	jp9c-vpr3-m5rf	
Missing Critical Step in Authentication	25-Oct-21	4	Nextcloud is an open-source, self-hosted productivity platform. Prior to Nextcloud Server versions 20.0.13, 21.0.5, and 22.2.0, the Two-Factor Authentication wasn't enforced for pages marked as public. Any page marked as `@PublicPage` could thus be accessed with a valid user session that isn't authenticated. This particularly affects the Nextcloud Talk application, as this could be leveraged to gain access to any private chat channel without going through the Two-Factor flow. It is recommended that the Nextcloud Server be upgraded to 20.0.13, 21.0.5 or 22.2.0. There are no	https://github.com/nextcloud/server/pull/28725, https://github.com/nextcloud/security-advisories/security/advisories/GHSA-7hvh-rc6f-px23	A-NEX-SERV-031121/452

('SQL Injection')			**CVE ID : CVE-2021-37371**		
Unrestricted Upload of File with Dangerous Type	26-Oct-21	6.5	Online Student Admission System 1.0 is affected by an insecure file upload vulnerability. A low privileged user can upload malicious PHP files by updating their profile image to gain remote code execution. **CVE ID : CVE-2021-37372**	N/A	A-ONL-ONLI-031121/465
openclinic_ga_project					
openclinic_ga					
Incorrect Permission Assignment for Critical Resource	26-Oct-21	9.3	OpenClinic GA 5.194.18 is affected by Insecure Permissions. By default the Authenticated Users group has the modify permission to openclinic folders/files. A low privilege account is able to rename mysqld.exe or tomcat8.exe files located in bin folders and replace with a malicious file that would connect back to an attacking computer giving system level privileges (nt authority\system) due to the service running as Local System. While a low privilege user is unable to restart the service through the application, a restart of the computer triggers the execution of the malicious file. The application also have unquoted service path issues.	N/A	A-OPE-OPEN-031121/466

Supported versions that are affected are Java SE: 7u311, 8u301, 11.0.12, 17; Oracle GraalVM Enterprise Edition: 20.3.3 and 21.2.0. Easily exploitable vulnerability allows unauthenticated attacker with network access via multiple protocols to compromise Java SE, Oracle GraalVM Enterprise Edition. Successful attacks of this vulnerability can result in unauthorized ability to cause a partial denial of service (partial DOS) of Java SE, Oracle GraalVM Enterprise Edition. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.1 Base Score 5.3 (Availability impacts). Successful attacks of this vulnerability can result in unauthorized read access to a subset of Java SE, Oracle GraalVM Enterprise Edition accessible data. Note: This vulnerability applies to Java deployments, typically in clients running sandboxed Java Web Start applications or sandboxed Java applets, that load and run untrusted code (e.g., code that comes from the internet) and rely on the Java sandbox for security. This vulnerability can also be exploited by using APIs in the specified Component, e.g., through a web service which supplies data to the APIs. CVSS 3.1 Base Score 3.7 (Confidentiality impacts). CVSS Vector: (CVSS:3.1/AV:N/AC:H/PR:N/UI:N/S:U/C:L/I:N/A:N). **CVE ID : CVE-2021-35603**	0004/

			CVE ID : CVE-2021-41127		
rasa_x					
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	22-Oct-21	4.3	Rasa X before 0.42.4 allows Directory Traversal during archive extraction. In the functionality that allows a user to load a trained model archive, an attacker has arbitrary write capability within specific directories via a crafted archive file. **CVE ID : CVE-2021-42556**	https://github.com/RasaHQ/rasa-x-security-advisories/security/advisories/GHSA-vp2h-j6px-56rc	A-RAS-RASA-031121/635
reddit					
snudown					
Use of a Broken or Risky Cryptographic Algorithm	21-Oct-21	4	Snudown is a reddit-specific fork of the Sundown Markdown parser used by GitHub, with Python integration added. In affected versions snudown was found to be vulnerable to denial of service attacks to its reference table implementation. References written in markdown ` [reference_name]: https://www.example.com` are inserted into a hash table which was found to have a weak hash function, meaning that an attacker can reliably generate a large number of collisions for it. This makes the hash table vulnerable to a hash-collision DoS attack, a type of algorithmic complexity attack. Further the hash table allowed for duplicate entries resulting in	https://github.com/reddit/snudown/security/advisories/GHSA-6gvv-9q92-w5f6, https://github.com/reddit/snudown/commit/1ac2c130b210539ee1e5d67a7bac93f9d8007c0e	A-RED-SNUD-031121/636

used in an OS Command ('OS Command Injection')			execute arbitrary OS command on the server via OS Command Injection when invoking Ghostscript. **CVE ID : CVE-2021-24684**		
Teamviewer					
teamviewer					
Improper Restriction of Operations within the Bounds of a Memory Buffer	25-Oct-21	6.8	This vulnerability allows remote attackers to execute arbitrary code on affected installations of TeamViewer 15.16.8.0. User interaction is required to exploit this vulnerability in that the target must visit a malicious page or open a malicious file. The specific flaw exists within the parsing of TVS files. The issue results from the lack of proper validation of user-supplied data, which can result in a memory corruption condition. An attacker can leverage this vulnerability to execute code in the context of the current process. Was ZDI-CAN-13697. **CVE ID : CVE-2021-34859**	https://community.teamviewer.com/English/discussion/117794/august-updates-security-patches/p1	A-TEA-TEAM-031121/677

fusioncube					
Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	27-Oct-21	5	There is a path traversal vulnerability in Huawei FusionCube 6.0.2.The vulnerability is due to that the software uses external input to construct a pathname that is intended to identify a directory that is located underneath a restricted parent directory, but the software does not properly validate the pathname. Successful exploit could allow the attacker to access a location that is outside of the restricted directory by a crafted filename. **CVE ID : CVE-2021-37130**	https://www.huawei.com/en/psirt/security-advisories/huawei-sa-20211020-01-pathtraversal-en	H-HUA-FUSI-031121/920

Improper Input Validation	19-Oct-21	5	An Improper Input Validation vulnerability in Packet Forwarding Engine manager (FXPC) process of Juniper Networks Junos OS allows an attacker to cause a Denial of Service (DoS) by sending specific DHCPv6 packets to the device and crashing the FXPC service. Continued receipt and processing of this specific packet will create a sustained Denial of Service (DoS) condition. This issue affects only the following platforms in ACX Series: ACX500, ACX1000, ACX1100, ACX2100, ACX2200, ACX4000, ACX5048, ACX5096 devices. Other ACX platforms are not affected from this issue. Consumption			in Juniper Networks Junos OS on EX2300, EX3400 and EX4300 Series platforms allows an adjacent attacker sending a stream of layer 2 frames will trigger an Aggregated Ethernet (AE) interface to go down and thereby causing a Denial of Service (DoS). By continuously sending a stream of specific layer 2 frames an attacker will sustain the Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS EX4300 Series All versions prior to 15.1R7-S7; 16.1 versions prior to 16.1R7-S8; 17.1 versions prior to 17.1R2-S12; 17.2 versions prior to 17.2R3-S4; 17.3 versions prior to 17.3R3-S8; 17.4 versions prior to 17.4R2-S10, 17.4R3-S2; 18.1 versions prior to 18.1R3-S10; 18.2 versions prior to 18.2R2-S7, 18.2R3-S3; 18.3 versions prior to 18.3R2-S4, 18.3R3-S2; 18.4 versions prior to 18.4R1-S7, 18.4R2-S4, 18.4R3-S1; 19.1 versions prior to 19.1R1-S5, 19.1R2-S1, 19.1R3; 19.2 versions prior to 19.2R1-S5, 19.2R2; 19.3 versions prior to 19.3R2-S2, 19.3R3; 19.4 versions prior to 19.4R1-S2, 19.4R2. mx150					
Improper Check for Unusual or Exceptional Conditions	19-Oct-21	5	An Improper Check for Unusual or Exceptional Conditions in packet processing on the MS-MPC/MS-MIC utilized by Juniper Networks Junos OS allows a malicious attacker to send a specific packet, triggering the MS-MPC/MS-MIC to reset, causing a Denial of Service (DoS). Continued receipt and processing of this packet will create a sustained Denial of Service (DoS) condition. This issue only affects specific versions of Juniper Networks Junos OS on MX Series: 17.3R3-S11; 17.4R2-S13; 17.4R3 prior to 17.4R3-S5; 18.1R3-S12; 18.2R2-S8, 18.2R3-S7, 18.2R3-S8; 18.3R3-S4; 18.4R3-S7; 19.1R3-S4, 19.1R3-S5; 19.2R1-S6; 19.3R3-S2; 19.4R2-S4, 19.4R2-S5; 19.4R3-S2; 20.1R2-S1; 20.2R2-S2, 20.2R2-S3, 20.2R3; 20.3R2, 20.3R2-S1; 20.4R1, 20.4R1-S1, 20.4R2; 21.1R1; This issue does not affect any version of Juniper Networks Junos OS prior to 15.1X49-D240; **CVE ID : CVE-2021-31351**	https://kb.juniper.net/JSA11216	H-JUN-MX15-031121/995

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			Juniper Networks Junos OS on MX Series configured for subscriber management / BBE allows an adjacent attacker to cause a crash by sending a specific username. This impacts authentication, authorization, and accounting (AAA) services on the MX devices and leads to a Denial of Service (DoS) condition. Continued receipted of these PPP login request will create a sustained Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS 15.1 versions prior to 15.1R7-S9; 17.3 versions prior to 17.3R3-S12; 17.4 versions prior to 17.4R3-S5; 18.1 versions prior to 18.1R3-S13; 18.2 versions prior to 18.2R3-S8; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S6; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S6, 19.3R3-S3; 19.4 versions prior to 19.4R3-S3; 20.1 versions prior to 20.1R3; 20.2 versions prior to 20.2R3-S1; 20.3 versions prior to 20.3R3; 20.4 versions prior to 20.4R3; 21.1 versions prior to 21.1R2. **CVE ID : CVE-2021-31366**	A11228	

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
Allocation of Resources Without Limits or Throttling	19-Oct-21	4.3	On MX Series platforms with MS-MPC/MS-MIC, an Allocation of Resources Without Limits or Throttling vulnerability in Juniper Networks Junos OS allows an unauthenticated network attacker to cause a partial Denial of Service (DoS) with a high rate of specific traffic. If a Class of Service (CoS) rule is attached to the service-set and a high rate of specific traffic is processed by this service-set, for some of the other traffic which has services applied and is being processed by this MS-MPC/MS-MIC drops will be observed. Continued receipted of this high rate of specific traffic will create a sustained Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS on MX Series with MS-MPC/MS-MIC: All versions prior to 17.4R3-S5; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S6; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S7, 19.3R3-S3; 19.4 versions prior to 19.4R3-S5; 20.1 versions prior to 20.1R2-S2, 20.1R3-S1; 20.2 versions prior to 20.2R3-S2; 20.3 versions prior to 20.3R3;	https://kb.juniper.net/JSA11231	H-JUN-MX15-031121/997

Allocation of Resources Without Limits or Throttling	19-Oct-21	4.3	On MX Series platforms with MS-MPC/MS-MIC, an Allocation of Resources Without Limits or Throttling vulnerability in Juniper Networks Junos OS allows an unauthenticated network attacker to cause a partial Denial of Service (DoS) with a high rate of specific traffic. If a Class of Service (CoS) rule is attached to the service-set and a high rate of specific traffic is processed by this service-set, for some of the other traffic which has services applied and is being processed by this MS-MPC/MS-MIC drops will be observed. Continued receipted of this high rate of specific traffic will create a sustained Denial of Service (DoS) condition. This issue	https://kb.juniper.net/JSA11231	H-JUN-MX20-031121/1009

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID

			Juniper Networks Junos OS on MX Series configured for subscriber management / BBE allows an adjacent attacker to cause a crash by sending a specific username. This impacts authentication, authorization, and accounting (AAA) services on the MX devices and leads to a Denial of Service (DoS) condition. Continued receipted of these PPP login request will create a sustained Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS 15.1 versions prior to 15.1R7-S9; 17.3 versions prior to 17.3R3-S12; 17.4 versions prior to 17.4R3-S5; 18.1 versions prior to 18.1R3-S13; 18.2 versions prior to 18.2R3-S8; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S6; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S6, 19.3R3-S3; 19.4 versions prior to 19.4R3-S3; 20.1 versions prior to 20.1R3; 20.2 versions prior to 20.2R3-S1; 20.3 versions prior to 20.3R3; 20.4 versions prior to 20.4R3; 21.1 versions prior to 21.1R2. **CVE ID : CVE-2021-31366**	A11228	

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
Allocation of Resources Without Limits or Throttling	19-Oct-21	4.3	On MX Series platforms with MS-MPC/MS-MIC, an Allocation of Resources Without Limits or Throttling vulnerability in Juniper Networks Junos OS allows an unauthenticated network attacker to cause a partial Denial of Service (DoS) with a high rate of specific traffic. If a Class of Service (CoS) rule is attached to the service-set and a high rate of specific traffic is processed by this service-set, for some of the other traffic which has services applied and is being processed by this MS-MPC/MS-MIC drops will be observed. Continued receipted of this high rate of specific traffic will create a sustained Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS on MX Series with MS-MPC/MS-MIC: All versions prior to 17.4R3-S5; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S6; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S7, 19.3R3-S3; 19.4 versions prior to 19.4R3-S5; 20.1 versions prior to 20.1R2-S2, 20.1R3-S1; 20.2 versions prior to 20.2R3-S2; 20.3 versions prior to 20.3R3;	https://kb.juniper.net/JSA11231	H-JUN-MX96-031121/1037

			20.4 versions prior to 20.4R2-S1, 20.4R3; 21.1 versions prior to 21.1R1-S1, 21.1R2. **CVE ID : CVE-2021-31369**		
N/A	19-Oct-21	4.3	An Incorrect Behavior Order vulnerability in the MAP-E automatic tunneling mechanism of Juniper Networks Junos OS allows an attacker to send certain malformed IPv4 or IPv6 packets to cause a Denial of Service (DoS) to the PFE on the device which is disabled as a result of the processing of these packets. Continued receipt and processing of these malformed IPv4 or IPv6 packets will create a sustained Denial of Service (DoS) condition. This issue only affects MPC 7/8/9/10/11 cards, when MAP-E IP reassembly is enabled on these cards. An indicator of compromise is the output: FPC ["FPC ID" # e.g. "0"] PFE #{PFE ID # e.g. "1"] : Fabric Disabled Example: FPC 0 PFE #1 : Fabric Disabled when using the command: show chassis fabric fpcs An example of a healthy result of the command use would be: user@device-re1> show chassis fabric fpcs Fabric management FPC state: FPC 0 PFE #0 Plane 0: Plane	https://kb.juniper.net/JSA11247, https://www.juniper.net/documentation/en_US/junos/topics/topic-map/map-e-configuring.html	H-JUN-MX96-031121/1038

Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	19-Oct-21	6.8	On PTX1000 System, PTX10002-60C System, after upgrading to an affected release, a Race Condition vulnerability between the chassis daemon (chassisd) and firewall process (dfwd) of Juniper Networks Junos OS, may update the device's interfaces with incorrect firewall filters. This issue only occurs when upgrading the device to an affected version of Junos OS. Interfaces intended to have protections may have no protections assigned to them. Interfaces with one type of protection pattern may have alternate protections assigned to them. Interfaces intended to have no protections may have protections assigned to them. These firewall rule misassignments may allow genuine traffic intended to be stopped at the interface to propagate further, potentially causing disruptions in services by propagating unwanted traffic. An attacker may be able to take advantage of	https://kb.juniper.net/JSA11250, https://kb.juniper.net/KB10956	H-JUN-PTX1-031121/1051

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			these misassignments. This issue affects Juniper Networks Junos OS on PTX1000 System: 17.2 versions 17.2R1 and later versions prior to 17.3 versions prior to 17.3R3-S12; 17.4 versions prior to 17.4R3-S5; 18.1 versions prior to 18.1R3-S13; 18.2 versions prior to 18.2R3-S8; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R1-S8, 18.4R2-S8, 18.4R3-S8; 19.1 versions prior to 19.1R3-S5; 19.2 versions prior to 19.2R3-S2; 19.3 versions prior to 19.3R2-S6, 19.3R3-S3; 19.4 versions prior to 19.4R2-S4, 19.4R3-S3; 20.1 versions prior to 20.1R3; 20.2 versions prior to 20.2R2-S3, 20.2R3; 20.3 versions prior to 20.3R2-S1, 20.3R3; 20.4 versions prior to 20.4R1-S1, 20.4R2. This issue does not affect Juniper Networks Junos OS prior to version 17.2R1 on PTX1000 System. This issue affects Juniper Networks Junos OS on PTX10002-60C System: 18.2 versions 18.2R1 and later versions prior to 18.4 versions prior to 18.4R3-S9; 19.1 versions later than 19.1R1 prior to 19.4 versions prior to 19.4R2-S5, 19.4R3-S5; 20.1 versions prior to 20.1R3-S1; 20.2		

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			versions prior to 20.2R3-S2; 20.3 versions prior to 20.3R3-S1; 20.4 versions 20.4R1 and later versions prior to 21.1 versions prior to 21.1R2; 21.2 versions 21.2R1 and later versions prior to 21.3 versions prior to 21.3R2. This issue does not affect Juniper Networks Junos OS prior to version 18.2R1 on PTX10002-60C System. This issue impacts all filter families (inet, inet6, etc.) and all loopback filters. It does not rely upon the location where a filter is set, impacting both logical and physical interfaces. **CVE ID : CVE-2021-31382**		
ptx10003					
Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	19-Oct-21	4	A Race Condition in the 'show chassis pic' command in Juniper Networks Junos OS Evolved may allow an attacker to crash the port interface concentrator daemon (picd) process on the FPC, if the command is executed coincident with other system events outside the attacker's control, leading to a Denial of Service (DoS) condition. Continued execution of the CLI command, under precise conditions, could create a sustained Denial of Service (DoS) condition. This issue affects all Juniper Networks	https://kb.juniper.net/JSA11212	H-JUN-PTX1-031121/1052

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			Junos OS Evolved versions prior to 20.1R2-EVO on PTX10003 and PTX10008 platforms. Junos OS is not affected by this vulnerability. **CVE ID : CVE-2021-0298**

Improper Check for Unusual or	19-Oct-21	5	An Improper Check for Unusual or Exceptional Conditions vulnerability	https://kb.juniper.net/JSA11223	H-JUN-QFX3-031121/1080

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
Exceptional Conditions			combined with Improper Handling of Exceptional Conditions in Juniper Networks Junos OS on QFX Series and PTX Series allows an unauthenticated network based attacker to cause increased FPC CPU utilization by sending specific IP packets which are being VXLAN encapsulated leading to a partial Denial of Service (DoS). Continued receipted of these specific traffic will create a sustained Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS on QFX Series: All versions prior to 17.3R3-S11; 17.4 versions prior to 17.4R2-S13, 17.4R3-S4; 18.1 versions prior to 18.1R3-S12; 18.2 versions prior to 18.2R2-S8, 18.2R3-S7; 18.3 versions prior to 18.3R3-S4; 18.4 versions prior to 18.4R1-S8, 18.4R2-S7, 18.4R3-S7; 19.1 versions prior to 19.1R1-S6, 19.1R2-S2, 19.1R3-S4; 19.2 versions prior to 19.2R1-S6, 19.2R3-S2; 19.3 versions prior to 19.3R3-S1; 19.4 versions prior to 19.4R2-S3, 19.4R3-S1; 20.1 versions prior to 20.1R2, 20.1R3; 20.2 versions prior to 20.2R2, 20.2R3; 20.3 versions prior to 20.3R1-S1, 20.3R2. 			Snapdragon Industrial IOT, Snapdragon IoT, Snapdragon Mobile, Snapdragon Voice & Music **CVE ID : CVE-2021-1977**		
Out-of-bounds Write	20-Oct-21	7.2	Possible stack overflow due to improper length check of TLV while copying the TLV to a local stack variable in Snapdragon Auto, Snapdragon Compute, Snapdragon Connectivity, Snapdragon Consumer Electronics Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon IoT, Snapdragon Mobile, Snapdragon Voice & Music, Snapdragon Wired Infrastructure and Networking **CVE ID : CVE-2021-30288**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-QCA6-031121/1579
Improper Input Validation	20-Oct-21	4.6	Possible out of bound access due to lack of validation of page offset before page is inserted in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Industrial IOT, Snapdragon Mobile **CVE ID : CVE-2021-30305**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-QCA6-031121/1580
Out-of-bounds Read	20-Oct-21	3.6	Possible buffer over read due to improper buffer allocation for file length passed from user space in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Industrial IOT, Snapdragon Mobile **CVE ID : CVE-2021-30306**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-QCA6-031121/1581

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
Improper Input Validation	20-Oct-21	5	Possible buffer overflow due to Improper validation of received CF-ACK and CF-Poll data frames in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Consumer Electronics Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon IoT, Snapdragon Mobile, Snapdragon Voice & Music **CVE ID : CVE-2021-30310**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-QCA6-031121/1582
Improper Authentication	20-Oct-21	5	Improper authentication of sub-frames of a multicast AMSDU frame can lead to information disclosure in Snapdragon Auto, Snapdragon Compute, Snapdragon Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon Mobile, Snapdragon Voice & Music, Snapdragon Wearables, Snapdragon Wired Infrastructure and Networking **CVE ID : CVE-2021-30312**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-QCA6-031121/1583
Improper Restriction of Operations within the Bounds of a Memory Buffer	20-Oct-21	7.2	Possible out of bound memory access due to improper boundary check while creating HSYNC fence in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon Mobile, Snapdragon Wearables	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-QCA6-031121/1584

			CVE ID : CVE-2021-1969		
Out-of-bounds Read	20-Oct-21	6.4	Possible buffer over read due to improper validation of frame length while processing AEAD decryption during ASSOC response in Snapdragon Auto, Snapdragon Compute, Snapdragon Connectivity, Snapdragon Consumer Electronics Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon IoT, Snapdragon Mobile, Snapdragon Voice & Music **CVE ID : CVE-2021-1977**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2563
Out-of-bounds Read	20-Oct-21	6.4	Possible buffer over read due to lack of length check while parsing beacon IE response in Snapdragon Auto, Snapdragon Compute, Snapdragon Connectivity, Snapdragon Consumer Electronics Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon Mobile, Snapdragon Voice & Music, Snapdragon Wired Infrastructure and Networking **CVE ID : CVE-2021-1980**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2564
Improper Input Validation	20-Oct-21	4.6	Possible out of bound access due to lack of validation of page offset before page is inserted in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Industrial IOT,	https://www.qualcomm.com/company/product-security/bulletins/octobe	H-QUA-SA81-031121/2565

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			Snapdragon Mobile **CVE ID : CVE-2021-30305**	r-2021-bulletin	
Out-of-bounds Read	20-Oct-21	3.6	Possible buffer over read due to improper buffer allocation for file length passed from user space in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Industrial IOT, Snapdragon Mobile **CVE ID : CVE-2021-30306**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2566
Improper Input Validation	20-Oct-21	5	Possible buffer overflow due to Improper validation of received CF-ACK and CF-Poll data frames in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Consumer Electronics Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon IoT, Snapdragon Mobile, Snapdragon Voice & Music **CVE ID : CVE-2021-30310**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2567
Improper Authentication	20-Oct-21	5	Improper authentication of sub-frames of a multicast AMSDU frame can lead to information disclosure in Snapdragon Auto, Snapdragon Compute, Snapdragon Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon Mobile, Snapdragon Voice & Music, Snapdragon Wearables, Snapdragon Wired Infrastructure and Networking	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2568

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			CVE ID : CVE-2021-30312		
Use After Free	20-Oct-21	7.2	Improper handling of sensor HAL structure in absence of sensor can lead to use after free in Snapdragon Auto **CVE ID : CVE-2021-30315**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2569
Improper Restriction of Operations within the Bounds of a Memory Buffer	20-Oct-21	7.2	Possible out of bound memory access due to improper boundary check while creating HSYNC fence in Snapdragon Auto, Snapdragon Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon Mobile, Snapdragon Wearables **CVE ID : CVE-2021-30316**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SA81-031121/2570
sc8180x\\+sdx55					
Out-of-bounds Write	20-Oct-21	7.2	Possible memory corruption due to lack of bound check of input index in Snapdragon Auto, Snapdragon Compute, Snapdragon Connectivity, Snapdragon Consumer IOT, Snapdragon Industrial IOT, Snapdragon IoT, Snapdragon Mobile, Snapdragon Voice & Music, Snapdragon Wearables **CVE ID : CVE-2021-1959**	https://www.qualcomm.com/company/product-security/bulletins/october-2021-bulletin	H-QUA-SC81-031121/2571
Out-of-bounds Write	20-Oct-21	7.2	Possible stack overflow due to improper length check of TLV while copying the TLV to a local stack variable in Snapdragon Auto, Snapdragon Compute,	https://www.qualcomm.com/company/product-security/bulletins/octobe	H-QUA-SC81-031121/2572
