Cisco					
asa_5505_firmware					
Improper Input Validation	27-Oct-21	7.8	A vulnerability in the software-based SSL/TLS message handler of Cisco Adaptive Security Appliance (ASA) Software and Firepower Threat Defense (FTD) Software could allow an unauthenticated, remote attacker to cause an affected device to reload, resulting in a denial of service (DoS) condition. This vulnerability is due to insufficient validation of SSL/TLS messages when the device performs software-based SSL/TLS decryption. An attacker could exploit this vulnerability by sending a crafted SSL/TLS message to an affected device. A successful exploit could allow the attacker to cause the affected device to reload, resulting in a DoS condition. Note: Datagram TLS (DTLS) messages cannot be used to exploit this vulnerability. **CVE ID : CVE-2021-34783**	https://tools.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-ftd-tls-decrypt-dos-BMxYjm8M	O-CIS-ASA_-051121/4198

Requirements			does not enforce an efficient password policy. This may allow an attacker with obtained user credentials to enumerate passwords and impersonate other application users and perform operations on their behalf. **CVE ID : CVE-2021-38462**		
Inadequate Encryption Strength	19-Oct-21	5.8	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 have inadequate encryption strength, which may allow an attacker to intercept the communication and steal sensitive information or hijack the session. **CVE ID : CVE-2021-38464**	N/A	O-INH-IR61-051121/4382
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	19-Oct-21	4.3	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 do not perform sufficient input validation on client requests from the help page. This may allow an attacker to perform a reflected cross-site scripting attack, which could allow an attacker to run code on behalf of the client browser. **CVE ID : CVE-2021-38466**	N/A	O-INH-IR61-051121/4383
Improper Neutralization of Input During Web Page Generation	19-Oct-21	3.5	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 are vulnerable to stored cross-scripting, which may allow an attacker to hijack	N/A	O-INH-IR61-051121/4384

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
('Cross-site Scripting')			sessions of users connected to the system. **CVE ID : CVE-2021-38468**		
Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	19-Oct-21	6.5	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 are vulnerable to an attacker using a ping tool to inject commands into the device. This may allow the attacker to remotely run commands on behalf of the device. **CVE ID : CVE-2021-38470**	N/A	O-INH-IR61-051121/4385
Improper Restriction of Rendered UI Layers or Frames	19-Oct-21	4.3	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 management portal does not contain an X-FRAME-OPTIONS header, which an attacker may take advantage of by sending a link to an administrator that frames the router's management portal and could lure the administrator to perform changes. **CVE ID : CVE-2021-38472**	N/A	O-INH-IR61-051121/4386
Improper Restriction of Excessive Authentication Attempts	19-Oct-21	5	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 have has no account lockout policy configured for the login page of the product. This may allow an attacker to execute a brute-force password attack with no time limitation and without harming the normal operation of the user. This	N/A	O-INH-IR61-051121/4387

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			could allow an attacker to gain valid credentials for the product interface. **CVE ID : CVE-2021-38474**		
Observable Discrepancy	19-Oct-21	5	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 authentication process response indicates and validates the existence of a username. This may allow an attacker to enumerate different user accounts. **CVE ID : CVE-2021-38476**	N/A	O-INH-IR61-051121/4388
Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	19-Oct-21	6.5	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 are vulnerable to an attacker using a traceroute tool to inject commands into the device. This may allow the attacker to remotely run commands on behalf of the device. **CVE ID : CVE-2021-38478**	N/A	O-INH-IR61-051121/4389
Cross-Site Request Forgery (CSRF)	19-Oct-21	9.3	InHand Networks IR615 Router's Versions 2.3.0.r4724 and 2.3.0.r4870 are vulnerable to cross-site request forgery when unauthorized commands are submitted from a user the web application trusts. This may allow an attacker to remotely perform actions on the router's management portal, such as making configuration changes, changing administrator	N/A	O-INH-IR61-051121/4390

Improper Authentication	19-Oct-21	7.5	The usage of an internal HTTP header created an authentication bypass vulnerability (CWE-287), allowing an attacker to view internal files, change settings, manipulate services and execute arbitrary code. This issue affects all Juniper Networks 128 Technology Session Smart Router versions prior to 4.5.11, and all versions of 5.0 up to and including 5.0.1. **CVE ID : CVE-2021-31349**	https://kb.juniper.net/JSA11256	O-JUN-128_-051121/4394
junos					
Improper Handling of Exceptional Conditions	19-Oct-21	7.1	An Improper Handling of Exceptional Conditions vulnerability in the processing of a transit or directly received malformed IPv6 packet in Juniper Networks Junos OS results in a kernel crash, causing the device to restart, leading to a Denial of Service (DoS). Continued receipt and processing of this packet will create a sustained Denial of Service (DoS) condition. This issue only affects systems with IPv6 configured. Devices with only IPv4	https://kb.juniper.net/JSA11213	O-JUN-JUNO-051121/4395

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			configured are not vulnerable to this issue. This issue affects Juniper Networks Junos OS: 19.4 versions prior to 19.4R3; 20.1 versions prior to 20.1R2; 20.2 versions prior to 20.2R1-S1, 20.2R2. This issue does not affect Juniper Networks Junos OS versions prior to 19.4R1. **CVE ID : CVE-2021-0299**		
Improper Privilege Management	19-Oct-21	9	An Improper Privilege Management vulnerability in the gRPC framework, used by the Juniper Extension Toolkit (JET) API on Juniper Networks Junos OS and Junos OS Evolved, allows a network-based, low-privileged authenticated attacker to perform operations as root, leading to complete compromise of the targeted system. The issue is caused by the JET service daemon (jsd) process authenticating the user, then passing configuration operations directly to the management daemon (mgd) process, which runs as root. This issue affects Juniper Networks Junos OS: 18.4 versions prior to 18.4R1-S8, 18.4R2-S8, 18.4R3-S8; 19.1 versions prior to 19.1R2-S3, 19.1R3-S5; 19.2 versions prior to 19.2R1-S7, 19.2R3-S2; 19.3 versions prior to	https://kb.juniper.net/JSA11215	O-JUN-JUNO-051121/4396

			Juniper Networks Junos OS Evolved: All versions prior to 20.4R2-S3-EVO, 20.4R3-EVO; 21.1-EVO versions prior to 21.1R2-EVO; 21.2-EVO versions prior to 21.2R2-EVO. **CVE ID : CVE-2021-31353**		
Out-of-bounds Read	19-Oct-21	5.4	An Out Of Bounds (OOB) access vulnerability in the handling of responses by a Juniper Agile License (JAL) Client in Juniper Networks Junos OS and Junos OS Evolved, configured in Network Mode (to use Juniper Agile License Manager) may allow an attacker to cause a partial Denial of Service (DoS), or lead to remote code execution (RCE). The vulnerability exists in the packet parsing logic on the client that processes the response from the server using a custom protocol. An attacker with control of a JAL License Manager, or with access to the local broadcast domain, may be able to spoof a new JAL License Manager and/or craft a response to the Junos OS License Client, leading to exploitation of this vulnerability. This issue only affects Junos systems configured in Network Mode. Systems that are configured in Standalone	https://kb.juniper.net/JSA11219	O-JUN-JUNO-051121/4399

			(DoS) condition. This issue affects: Juniper Networks Junos OS All versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S7; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S6, 19.3R3-S3; 19.4 versions prior to 19.4R1-S4, 19.4R3-S6; 20.1 versions prior to 20.1R2-S2, 20.1R3; 20.2 versions prior to 20.2R3-S1; 20.3 versions prior to 20.3R3; 20.4 versions prior to 20.4R3; 21.1 versions prior to 21.1R2. Juniper Networks Junos Evolved is not affected. **CVE ID : CVE-2021-31367**		
Uncontrolled Resource Consumption	19-Oct-21	7.8	An Uncontrolled Resource Consumption vulnerability in the kernel of Juniper Networks JUNOS OS allows an unauthenticated network based attacker to cause 100% CPU load and the device to become unresponsive by sending a flood of traffic to the out-of-band management ethernet port. Continued receipted of a flood will create a sustained Denial of Service (DoS) condition. Once the flood subsides the system will recover by itself. An indication that the system is affected by this issue would be that kernel and netisr process are shown to be	https://kb.juniper.net/JSA11230	O-JUN-JUNO-051121/4410

Allocation of Resources Without Limits or Throttling	19-Oct-21	4.3	On MX Series platforms with MS-MPC/MS-MIC, an Allocation of Resources Without Limits or Throttling vulnerability in Juniper	https://kb.juniper.net/JSA11231	O-JUN-JUNO-051121/4411

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			Networks Junos OS allows an unauthenticated network attacker to cause a partial Denial of Service (DoS) with a high rate of specific traffic. If a Class of Service (CoS) rule is attached to the service-set and a high rate of specific traffic is processed by this service-set, for some of the other traffic which has services applied and is being processed by this MS-MPC/MS-MIC drops will be observed. Continued receipted of this high rate of specific traffic will create a sustained Denial of Service (DoS) condition. This issue affects: Juniper Networks Junos OS on MX Series with MS-MPC/MS-MIC: All versions prior to 17.4R3-S5; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S6; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S7, 19.3R3-S3; 19.4 versions prior to 19.4R3-S5; 20.1 versions prior to 20.1R2-S2, 20.1R3-S1; 20.2 versions prior to 20.2R3-S2; 20.3 versions prior to 20.3R3; 20.4 versions prior to 20.4R2-S1, 20.4R3; 21.1 versions prior to 21.1R1-S1, 21.1R2. **CVE ID : CVE-2021-31369**		

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
N/A	19-Oct-21	3.3	An Incomplete List of Disallowed Inputs vulnerability in Packet Forwarding Engine (PFE) of Juniper Networks Junos OS on QFX5000 Series and EX4600 Series allows an adjacent unauthenticated attacker which sends a high rate of specific multicast traffic to cause control traffic received from the network to be dropped. This will impact control protocols (including but not limited to routing-protocols) and lead to a Denial of Service (DoS). Continued receipt of this specific multicast traffic will create a sustained Denial of Service (DoS) condition. This issue affects Juniper Networks Junos OS on QFX5000 and EX4600 Series: All versions prior to 17.3R3-S12; 17.4 versions prior to 17.4R3-S5; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R3-S9; 19.1 versions prior to 19.1R3-S6; 19.2 versions prior to 19.2R1-S7, 19.2R3-S3; 19.3 versions prior to 19.3R2-S6, 19.3R3-S3; 19.4 versions prior to 19.4R1-S4, 19.4R3-S3; 20.1 versions prior to 20.1R2-S2, 20.1R3-S1; 20.2 versions prior to 20.2R3-S2; 20.3 versions prior to 20.3R3; 20.4 versions prior to	https://kb.juniper.net/JSA11232	O-JUN-JUNO-051121/4412

Missing Release of Resource after Effective Lifetime	19-Oct-21	4.3	In broadband environments, including but not limited to Enhanced Subscriber Management, (CHAP, PPP, DHCP, etc.), on Juniper Networks Junos OS devices where RADIUS servers are configured for managing subscriber access and a subscriber is logged in and then requests to logout, the subscriber may be forced into a "Terminating" state by an attacker who is able to send spoofed messages appearing to originate from trusted RADIUS server(s) destined to the device in response to the subscriber's request. These spoofed messages cause the Junos OS General Authentication Service (authd) daemon to force the broadband subscriber into this	https://www.juniper.net/documentation/us/en/software/junos/subscriber-mgmt-sessions/topics/topic-map/general-authentication-service-events-tracing.html, https://kb.juniper.net/JSA11246	O-JUN-JUNO-051121/4420

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			"Terminating" state which the subscriber will not recover from thereby causing a Denial of Service (DoS) to the endpoint device. Once in the "Terminating" state, the endpoint subscriber will no longer be able to access the network. Restarting the authd daemon on the Junos OS device will temporarily clear the subscribers out of the "Terminating" state. As long as the attacker continues to send these spoofed packets and subscribers request to be logged out, the subscribers will be returned to the "Terminating" state thereby creating a persistent Denial of Service to the subscriber. An indicator of compromise may be seen by displaying the output of "show subscribers summary". The presence of subscribers in the "Terminating" state may indicate the issue is occurring. This issue affects: Juniper Networks Junos OS 17.3 versions prior to 17.3R3-S12; 17.4 versions prior to 17.4R3-S5; 18.1 versions prior to 18.1R3-S13; 18.2 versions prior to 18.2R3-S8; 18.3 versions prior to 18.3R3-S5; 18.4 versions prior to 18.4R2-S8, 18.4R3-S9; 19.1 versions

			21.1R2. **CVE ID : CVE-2021-31385**		
N/A	19-Oct-21	2.6	A Protection Mechanism Failure vulnerability in the J-Web HTTP service of Juniper Networks Junos OS allows a remote unauthenticated attacker to perform Person-in-the-Middle (PitM) attacks against the device. This issue affects: Juniper Networks Junos OS 12.3 versions prior to 12.3R12-S20; 15.1 versions prior to 15.1R7-S11; 18.3 versions prior to 18.3R3-S6; 18.4 versions prior to 18.4R3-S10; 19.1 versions prior to 19.1R3-S7; 19.2 versions prior to 19.2R3-S4; 19.3 versions prior to 19.3R3-S4; 19.4 versions prior to 19.4R3-S6; 20.1 versions prior to 20.1R3-S2; 20.2 versions prior to 20.2R3-S3; 20.3 versions prior to 20.3R3-S1; 20.4 versions prior to 20.4R3; 21.1 versions prior to 21.1R3; 21.2 versions prior to 21.2R2. **CVE ID : CVE-2021-31386**	https://kb.juniper.net/JSA11254	O-JUN-JUNO-051121/4426
junos_os_evolved					
Improper Handling of Exceptional Conditions	19-Oct-21	6.4	A vulnerability in the processing of TCP MD5 authentication in Juniper Networks Junos OS Evolved may allow a BGP or LDP session configured with MD5 authentication to succeed,	https://kb.juniper.net/JSA11211	O-JUN-JUNO-051121/4427

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			even if the peer does not have TCP MD5 authentication enabled. This could lead to untrusted or unauthorized sessions being established, resulting in an impact on confidentiality or stability of the network. This issue affects Juniper Networks Junos OS Evolved: All versions prior to 20.3R2-S1-EVO; 20.4 versions prior to 20.4R2-EVO; 21.1 versions prior to 21.1R2-EVO. Juniper Networks Junos OS is not affected by this issue. **CVE ID : CVE-2021-0297**		
Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	19-Oct-21	4	A Race Condition in the 'show chassis pic' command in Juniper Networks Junos OS Evolved may allow an attacker to crash the port interface concentrator daemon (picd) process on the FPC, if the command is executed coincident with other system events outside the attacker's control, leading to a Denial of Service (DoS) condition. Continued execution of the CLI command, under precise conditions, could create a sustained Denial of Service (DoS) condition. This issue affects all Juniper Networks Junos OS Evolved versions prior to 20.1R2-EVO on PTX10003 and PTX10008	https://kb.juniper.net/JSA11212	O-JUN-JUNO-051121/4428

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			platforms. Junos OS is not affected by this vulnerability. **CVE ID : CVE-2021-0298**		
Improper Privilege Management	19-Oct-21	9	An Improper Privilege Management vulnerability in the gRPC framework, used by the Juniper Extension Toolkit (JET) API on Juniper Networks Junos OS and Junos OS Evolved, allows a network-based, low-privileged authenticated attacker to perform operations as root, leading to complete compromise of the targeted system. The issue is caused by the JET service daemon (jsd) process authenticating the user, then passing configuration operations directly to the management daemon (mgd) process, which runs as root. This issue affects Juniper Networks Junos OS: 18.4 versions prior to 18.4R1-S8, 18.4R2-S8, 18.4R3-S8; 19.1 versions prior to 19.1R2-S3, 19.1R3-S5; 19.2 versions prior to 19.2R1-S7, 19.2R3-S2; 19.3 versions prior to 19.3R2-S6, 19.3R3-S2; 19.4 versions prior to 19.4R1-S4, 19.4R2-S4, 19.4R3-S3; 20.1 versions prior to 20.1R2-S2, 20.1R3; 20.2 versions prior to 20.2R2-S3, 20.2R3; 20.3 versions prior to 20.3R2-S1, 20.3R3; 20.4 versions prior to 20.4R2. Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			not affect Juniper Networks Junos OS versions prior to 18.4R1. Juniper Networks Junos OS Evolved: All versions prior to 20.4R2-EVO; 21.1-EVO versions prior to 21.1R2-EVO. **CVE ID : CVE-2021-31350**		
Improper Handling of Exceptional Conditions	19-Oct-21	5	An Improper Handling of Exceptional Conditions vulnerability in Juniper Networks Junos OS and Junos OS Evolved allows an attacker to inject a specific BGP update, causing the routing protocol daemon (RPD) to crash and restart, leading to a Denial of Service (DoS). Continued receipt and processing of the BGP update will create a sustained Denial of Service (DoS) condition. This issue affects very specific versions of Juniper Networks Junos OS: 19.3R3-S2; 19.4R3-S3; 20.2 versions 20.2R2-S3 and later, prior to 20.2R3-S2; 20.3 versions 20.3R2 and later, prior to 20.3R3; 20.4 versions 20.4R2 and later, prior to 20.4R3; 21.1 versions prior to 21.1R2. Juniper Networks Junos OS 20.1 is not affected by this issue. This issue also affects Juniper Networks Junos OS Evolved: All versions prior to 20.4R2-S3-EVO, 20.4R3-EVO; 21.1-EVO versions	https://kb.juniper.net/JSA11218	O-JUN-JUNO-051121/4430

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID
			prior to 21.1R2-EVO; 21.2-EVO versions prior to 21.2R2-EVO. **CVE ID : CVE-2021-31353**		
Out-of-bounds Read	19-Oct-21	5.4	An Out Of Bounds (OOB) access vulnerability in the handling of responses by a Juniper Agile License (JAL) Client in Juniper Networks Junos OS and Junos OS Evolved, configured in Network Mode (to use Juniper Agile License Manager) may allow an attacker to cause a partial Denial of Service (DoS), or lead to remote code execution (RCE). The vulnerability exists in the packet parsing logic on the client that processes the response from the server using a custom protocol. An attacker with control of a JAL License Manager, or with access to the local broadcast domain, may be able to spoof a new JAL License Manager and/or craft a response to the Junos OS License Client, leading to exploitation of this vulnerability. This issue only affects Junos systems configured in Network Mode. Systems that are configured in Standalone Mode (the default mode of operation for all systems) are not vulnerable to this issue. This issue affects:	https://kb.juniper.net/JSA11219	O-JUN-JUNO-051121/4431

Weakness	Publish Date	CVSS	Description & CVE ID	Patch	NCIIPC ID

bounds Write			drivers/gpu/drm/amd/display/amdgpu_dm/amdgpu_dm_debugfs.c in the Linux kernel through 5.14.14 allows a heap-based buffer overflow by an attacker who can write a string to the AMD GPU display drivers debug filesystem. There are no checks on size within parse_write_buffer_into_params when it uses the size of copy_from_user to copy a userspace buffer into a 40-byte heap buffer. **CVE ID : CVE-2021-42327**	ernel.org/pub/scm/linux/kernel/git/torvalds/linux.git/log/drivers/gpu/drm/amd/display/amdgpu_dm/amdgpu_dm_debugfs.c, https://www.mail-archive.com/amd-gfx@lists.freedesktop.org/msg69080.html	051121/4443
Out-of-bounds Write	20-Oct-21	4.6	The firewire subsystem in the Linux kernel through 5.14.13 has a buffer overflow related to drivers/media/firewire/firedtv-avc.c and drivers/media/firewire/firedtv-ci.c, because avc_ca_pmt mishandles bounds checking. **CVE ID : CVE-2021-42739**	https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git/commit/?id=35d2969ea3c7d32aee78066b1f3cf61a0d935a4e, https://seclists.org/oss-sec/2021/q2/46	O-LIN-LINU-051121/4444

Incorrect Conversion between Numeric Types	22-Oct-21	7.5	An issue was discovered in OpenPOWER 2.6 firmware. unpack_timestamp() calls le32_to_cpu() for endian conversion of a uint16_t "year" value, resulting in a type mismatch that can truncate a higher integer value to a smaller one, and bypass a timestamp check. The fix is to use the right endian conversion function. **CVE ID : CVE-2021-36357**	https://github.com/open-power/skiboot/commit/5be38b672c1410e2f10acd3ad2eecfdc81d5daf7	O-OPE-SKIB-051121/4459

Improper Restriction of Operations within the Bounds of a Memory Buffer	19-Oct-21	7.1	A flaw was found in the libtpms code that may cause access beyond the boundary of internal buffers. The vulnerability is triggered by specially-crafted TPM2 command packets that then trigger the issue when the state of the TPM2's volatile state is written. The highest threat from this vulnerability is to system availability. This issue affects libtpms versions before 0.8.5, before 0.7.9 and before 0.6.6. **CVE ID : CVE-2021-3746**	https://bugzilla.redhat.com/show_bug.cgi?id=1998588	O-RED-ENTE-061121/7405

			CVE ID : CVE-2021-21744		
Improper Authentication	20-Oct-21	4.3	ZTE MF971R product has a Referer authentication bypass vulnerability. Without CSRF verification, an attackercould use this vulnerability to perform illegal authorization operations by sending a request to the user to click. **CVE ID : CVE-2021-21745**	https://support.zte.com.cn/support/news/LoopholeInfoDetail.aspx?newsId=1019764	O-ZTE-MF97-061121/7414
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	20-Oct-21	4.3	ZTE MF971R product has reflective XSS vulnerability. An attacker could use the vulnerability to obtain cookie information. **CVE ID : CVE-2021-21746**	https://support.zte.com.cn/support/news/LoopholeInfoDetail.aspx?newsId=1019764	O-ZTE-MF97-061121/7415
Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	20-Oct-21	4.3	ZTE MF971R product has reflective XSS vulnerability. An attacker could use the vulnerability to obtain cookie information. **CVE ID : CVE-2021-21747**	https://support.zte.com.cn/support/news/LoopholeInfoDetail.aspx?newsId=1019764	O-ZTE-MF97-061121/7416
Out-of-bounds Write	20-Oct-21	7.5	ZTE MF971R product has two stack-based buffer overflow vulnerabilities. An attacker could exploit the vulnerabilities to execute arbitrary code. **CVE ID : CVE-2021-21748**	https://support.zte.com.cn/support/news/LoopholeInfoDetail.aspx?newsId=1019764	O-ZTE-MF97-061121/7417
